Facsimile of Seal on Garden Seeds

1916

This Label sealing a Package is a Guarantee that it contains

Genuine Genesee Garden Seed

of the variety marked on the face of the package

INTRODUCTORY

OUR SINCERE THANKS are due to our old customers, not only for their patronage, but for their kind words about us to neighbors and friends, resulting in an ever-widening circle of planters using our high-grade seeds.

We have always been firm believers in the idea, in its universal application, that the **best is none too good**, and it is particularly true of seeds, on the quality of which so much depends at the harvest-time. **After several years' experience, we can say more positively than ever before that the best seeds grown are sold under the brands**

GENUINE GENESSEE GARDEN SEED GENUINE CROWN FIELD SEED

From all sides we have received the most flattering testimonials as to the high quality of these seeds. They germinate quickly, grow vigorously and produce crops of highest quality and unusually large quantity.

But bear in mind that the seed is not everything; there must be forethought and judgment exercised by the planter in every detail, from the sowing of the seed to the harvesting of the crop. High quality of seed will not guarantee a good crop, but it is a long step in the right direction. One thing is very sure, cheap and poor seed will guarantee a poor crop.

Your attention is especially called to "Our Warranty," on page 1, and to a few remarks on page 18 as to high quality in Field Seeds as exemplified by the "Crown Brand."

We take pleasure in presenting to you this catalogue, which we have aimed to make accurate and useful, and trust it may prove interesting and a practical help to all. We solicit your orders, which will have our best attention in every case.

Very truly yours,

Wilmington, Delaware
January, 1916

THE PHILIPS-THOMPSON COMPANY

REMARKS TO PURCHASERS

READ CAREFULLY

Terms.—We pay cash for seeds and other goods listed in this catalogue. We therefore sell for cash, except as may be arranged. Intending purchasers unknown to us, if desiring credit, will be asked to establish their credit-standing through recognized agencies. This is but ordinary business prudence, and should not give offense to anyone.

Parcel Post.—Under the new parcel-post law, now thoroughly established and working satisfactorily, we are able to enlarge very materially the scope of our free delivery by mail, and to make the following offer of

Seeds by Mail.—Orders for all seeds listed on pages 1 to 16, that are sold by weight, will be sent by parcel post, postpaid, at printed prices. This will also include pints and quarts of Beans, Sugar Corn and Peas; but larger quantities of these will be sent by express or freight at buyer's expense, except in case of the **Special Offer**, as given below.

Deliveries.—We deliver by our own teams to city and nearby suburban points, and to express offices, railroad and boat lines, for shipment to out-of-town points.

Special Offer.—On orders amounting to \$5 or more, at prices given in this catalogue, for any seeds listed on pages 1 to 16, we will prepay freight charges to any point on regular railroad or boat lines in the Delaware-Maryland-Virginia peninsula, and to within 50 miles of Wilmington in other directions.

Free Bags.—The usual custom among seedsmen is to charge for bags, especially seamless bags for field seeds. We will follow this custom on seeds sold in bulk in the usual competitive way. **But on all seeds marked in this catalogue as sold in sealed bags, no charge will be made for the bags.**

Seeds in Packets.—So much cheap commission packet seed is sold in these days, of doubtful age and undoubted poverty of quantity and quality, that packet seeds are in bad repute. It is no more than just to this department of our business to state that the seed in our sealed packets is of the same high quality as in our larger sealed bags.

Prices.—Great care has been taken to fix the prices in this catalogue at the lowest level consistent with high quality. We hope to adhere to them throughout the season; but, should the market require it, we reserve the right to make any changes in price without previous notice.

VEGETABLE SEEDS FOR 1916

Our Warranty On the first cover page of this catalogue is a facsimile of the seal used on bags containing Genuine Genesee Garden Seed. The seed put up and sold under this seal is guaranteed as to quality, so far as it is possible to guarantee any product that must pass through many human hands. Seed cannot be turned out by machinery and be practically perfect. Nature and man are the factors in the production of seed and its preparation for market, and both have their off-days when things go awry and the work is messed. There can not be greater care than is taken to avoid mistakes in the growing and marketing of the **Genuine Genesee Garden Seed**; yet mistakes are possible, and we can bear the burden of them only to this extent:

If anyone has bought a bag of the **Genuine Genesee Garden Seed** under an unbroken seal, has planted the seed and found it to be not as represented, and not satisfactory, we will either refund the money or will replace the seed with other seed of equal value either of the same or any other variety the purchaser may select.

Further than this we cannot go. We cannot guarantee a crop nor be responsible beyond the value of the seed sold. We rely on the honesty of our customers not to make unjust claims, and, on the other hand, we will be liberal in the treatment of all cases of crop-failure and unsatisfactory results.

ASPARAGUS One ounce to 50 feet of row

Enrich the soil with liberal applications of well-rotted stable manure. Sow the seed early in the spring in drills 1 foot apart, and thin out the small plants to about 3 inches apart in the row. The next spring transplant them into a bed in rows 18 inches apart, 9 to 12 inches apart in the row. Keep the ground free of weeds and well cultivated, especially the first two years. It will require three years to get the bed well established, and it can then be counted on for twenty years' bearing. In addition to rich compost, or stable manure, apply annually our Special Asparagus Salt, ten bushels to the acre.

Below we list the five varieties of Asparagus that we consider the most desirable. Growers cannot fail to get good results by planting any one of the five; but, in our opinion, the **Genesee Thick-Stem** takes the lead on all points. This variety is of French origin. The shoots are extra large, tender and fine-flavored, and will always bring top market prices. The yield is enormous under favorable conditions, and a few acres set to this grand variety will give a larger net income than from almost any other crop.

Genesee Thick-Stem Asparagus

Price-List of Asparagus Seed and Roots

	Seed			Roots	
	Oz.	¼lb.	Lb.	100	1,000
Genesee Thick-Stem. As described above.....	\$0 10	\$0 25	\$0 80
Barr's Mammoth. A favorite variety; large shoots; fine quality....	10	20	50
Palmetto. Good yield; large shoots.	10	20	50
Conover's Colossal. Shoots abundant, but not very large.....	10	20	50
Giant Argenteuil. Large shoots....	10	20	50

NOTE.—Owing to the limited demand for Asparagus roots in this market, we do not keep them in stock, but have arranged with our grower to ship our orders immediately by express. Customers should anticipate their wants by at least four days, as usually that time elapses before the roots arrive. Prices of Asparagus roots vary with the market and will be quoted on application. We handle only two-year-old roots of the above varieties. Do not delay placing your order, as our grower is very often sold out before May 1; in fact, he could not fill our orders after April 10 in 1915.

BEANS, DWARF or BUSH One quart to 100 feet of row

Plant at intervals of two weeks from May 1 to August 15. In field culture the rows should be about 2½ feet apart, and in garden culture 18 inches apart. Drop or drill the seed 2 or 3 inches apart to a depth of 1 or 2 inches.

There are two main types of Bush Beans—**Green-podded varieties** and **Wax-podded varieties**. The two classes have many characteristics in common, as to their method of growth and the quantity and quality of product. As the names clearly indicate, one class produces green pods and the other yellow, or wax pods; but with both the main object of planting is to obtain the greatest out-turn of pods that are free from stringiness and toughness when cooked. A few varieties are grown mainly for winter shelled Beans.

In the price-list below and on the opposite page we have listed the varieties that are most largely planted in this section. While all these varieties are desirable and give excellent results to the planter, there are two varieties, one in each class, that are, in our opinion, preëminent:

In the Green-Pod class, the **GIANT SNAP-SHORT**.
In the Wax-Pod, the **GENESEE KIDNEY WAX**.
We recommend these two varieties above all others.

Genesee Kidney Wax Beans

LIMA BEANS, Dwarf or Bush

Under this head we list only two varieties. There are a few other kinds, but for quantity and quality of product they are not in the same class with the two we recommend—**Fordhook** or **Dreer's Improved Bush Lima**, and **Genesee New Century Bush Lima**. Both of these varieties grow in true bush-form, stand up well and show very little tendency to run. The well-filled pods are borne in large clusters, while the Beans have a highly appetizing flavor.

POLE or RUNNING BEANS

One quart will plant 100 to 175 hills

The various sorts of Pole Beans should be planted a week or two later than the early dwarf kinds. The Limas, especially, should not be planted until the ground is thoroughly warm. Plant in hills 3 feet apart, and 1 to 2 inches deep, five or six seeds to each hill, and thin to three plants to each hill. Beans of a flat shape will come up more readily if planted with the "eye" down.

There are three types of Pole Limas, the round, thick Lima, the very broad, flat kind, and intermediate between these two, neither as broad as the one nor as thick as the other. We are not partial to the broad, flat Lima, and it is for that reason that we recommend the following two varieties: **Genesee Early Lima** and **Dreer's Improved Pole Lima**. The first-named, though called an early Lima, is good for planting any time of the Lima Bean season, early or late. It has some of the characteristics of the well-known King of the Garden Lima, but we think it is a decided improvement on it.

Price-List of All Varieties of Beans

NOTE.—Owing to the exceedingly short crop of Beans (in many varieties a complete failure) we omit prices, but can furnish a very limited supply of some varieties at market prices at the time of sale.

DWARF GREEN-PODDED. Very short crop

	Pt.	Qt.	Pk.	Bus.
GENESEE EXTRA-EARLY. Round pod; may be planted quite early.....				
GIANT SNAP-SHORT. Round pod; great producer; fine quality.....				
STRINGLESS VALENTINE. Round pod; the very highest type of Valentine....				
Boston Pea, or Navy. The small, white Bean, used shelled.....				
Large White Marrow. The large, white Bean, like the former except in size....				

DWARF WAX-PODDED. Almost a failure

BRITTLE WHITE WAX. Oval pod; white Bean; many good points.....				
GENESEE KIDNEY WAX. Round pod; speckled Bean; very productive; fine quality.....				
MAMMOTH RUST-PROOF WAX. Oval pod; large, black Bean; profuse bearer.				
GENESEE GOLDEN WAX. Flat pod; speckled Bean; the best strain.....				
PROLIFIC BLACK WAX. Round pod; black Bean; better than German Wax...				
Currie's Rust-Proof Wax. Oval pod; black Bean; good bearer.....				

DWARF or BUSH LIMAS

FORDHOOK or DREER'S IMPROVED BUSH LIMA. Round, thick Bean; fine in every way.....	\$0 25	\$0 45	\$2 50	\$9 00
GENESEE NEW CENTURY BUSH LIMA. Broader Bean, but also thick through; finest quality.....	25	45	2 50	9 00

Large White Lima. Similar to the former, but not its equal...	20	30	1 60	6 00
Jersey Lima. Another large, flat Bean of good average quality...	20	30	1 60	6 00

BEETS

One ounce to 50 feet of row

TABLE VARIETIES

Sow as early in the spring as the ground can be worked and every two weeks for a succession up to the last of July. Sow in well-enriched, finely harrowed soil in rows 12 to 15 inches apart and 1 inch deep. When up well, thin to about 4 inches apart, the young Beets pulled out being excellent for greens.

The characteristics of a good Beet may be summed up as follows: Good yielder and fine quality; sweet-flavored, crisp, juicy and fine-grained; color rich blood-red; smooth skin; top and tap-root both small. The varieties that correspond most closely to this description are the **Lightning Blood** and **Crosby's Extra-Early Egyptian** for early planting; **Genesee Early Blood** and **Genesee All-Seasons** for medium and late planting. We can conscientiously recommend these four varieties to give the most satisfactory results, and we do not think they are surpassed or even equaled by some other much-talked-of and widely advertised varieties.

STOCK-FEEDING BEETS

Five to six pounds to an acre

No crop equals Sugar or Mangel Beets for feeding stock, especially milch cows, during the winter, keeping them in healthy condition, and inducing a larger flow of milk than can be obtained by twice the cost in dry feed alone. Sow seed from April 15 to June 15 in drills 2 feet apart; thin out to 9 inches apart in the row.

Some growers want roots very rich in sugar with a fair average yield, in which case they cannot do better than to plant the **Genesee Improved Sugar Beet**. Others want to obtain an immense yield per acre, without much regard to very high percentage of sugar. This result can best be obtained by planting one or the other of the **Giant Mangels**, **Genesee Golden Giant Mangel** or **Genesee Red Giant Mangel**, according as one prefers a yellow-fleshed or red-fleshed root. Both of these varieties give splendid results and are highly paying investments for the dairy farm.

Genesee Early Blood Beet

Lane's Imperial Sugar. A Sugar Beet of good general qualities...	05	15	40
Golden Tankard Mangel. Very largely planted; a desirable Mangel...	05	15	40
Long Red Mangel. Heavy yielder and next in value to Genesee Red Giant...	05	15	40

BRUSSELS SPROUTS

One ounce to 2,000 plants

Sprouts resemble small cabbages growing closely on the stalk of the plant, and are highly esteemed for boiling during the winter months. Plant like cabbage.

IMPROVED HALF-DWARF. Pkt. 5 cts., oz. 20 cts., ¼lb. 50 cts., lb. \$1.75.

CABBAGE, Long Island-Grown

One ounce will produce 2,000 plants

Sow the seed in hotbeds in February or March, and transplant in the open ground as early as it can be placed in good condition. A month later follow with the second earliest, and in May sow the seed of the winter varieties, transplanting them in July. The early sorts can be planted about 2 feet apart each way, and the large late varieties about 3 feet apart.

Selected Early Jersey Wakefield Cabbage

The choice of an early variety of Cabbage is practically limited to one, viz.: **Selected Early Jersey Wakefield**. There is none other equal to it. It makes solid, cone-shaped heads, ready to market in about seventy-five days from sowing the seed. Following this, plant the **Genesee Early Solid**, the very best, early, round-head variety, solid, fine in quality, uniform in color, form and size. Then comes that sure header, **Genesee Midseason**, always dependable, producing heads of uniform size, round, somewhat flattened, firm and fine-grained. For the winter store three varieties are preeminent—**Danish Ballhead**, **Perfect Late Flat Dutch**, and **Perfect Late Drumhead**. The first-named produces round heads, not large, but solid and long-keeping. It is not generally popular but has a few very firm friends. The **Flat Dutch** and **Drumhead** of the **Perfect** strain are the main reliance for winter Cabbage. Of the Savoy and Red types of Cabbage, there are only two varieties that need be considered—**Genesee New Savoy** and **Mammoth Rock Red**. They are decidedly the best of their kind.

Price-List of All Varieties of Cabbage

	Oz.	½lb.	Lb.
SELECTED EARLY JERSEY WAKEFIELD. Very early; solid, cone-shaped heads.	\$0 20	\$0 60	\$2 00
GENESEEE EARLY SOLID. Best early, round-head variety; firm, fine quality; good yield.	20	50	1 75
GENESEEE MIDSEASON. Larger and later than the former but equally solid and fine-grained; very productive.	20	50	1 75
DANISH BALLHEAD. Very solid; medium-sized round heads; wonderful keeper; fine texture.	20	50	1 75
PERFECT LATE FLAT DUTCH. Heavy, round heads, somewhat flattened; solid, fine-grained; sure header; long keeper.	20	50	1 75
PERFECT LATE DRUMHEAD. Extra-large, solid heads. The best of the Drumhead type.	20	50	1 75
GENESEEE NEW SAVOY. The highest type of Savoy Cabbage; no equal.	20	60	2 00
MAMMOTH ROCK RED. The best of the red Cabbages. Plant no other.	20	60	2 00
Early Winnigstadt. A small, cone-shaped variety.	20	50	1 75
Charleston Wakefield. Later than the Early Jersey Wakefield.	20	50	1 75
Allhead Early and Early Flat Dutch. Two flat-headed, early varieties; very similar.	20	50	1 75
Surehead and Early Summer. Similar. Highly esteemed by many planters.	20	50	1 75
Flat Dutch. A good imported strain of this winter Cabbage; medium head; fully equal to the strain largely sold by seedsmen, but it is not the Genuine Genesee stock.	15	40	1 25

FROST-PROOF CABBAGE PLANTS

A CHANCE FOR EXTRA PROFIT

These are grown on a sea island on the South Carolina Coast during the winter months. They make a slow, steady growth and are so hardy at ten weeks old that they can be shipped north and planted out four to six weeks earlier than home-grown hotbed or coldframe plants. These **Frost-proof Cabbage** plants will stand a temperature of 10 degrees above zero without injury. Ice, snow or freezing of the soil will not hurt them. The plants, when set out, naturally do not grow at once, but they establish a firm root-growth, and as soon as spring weather opens, they grow very fast and mature marketable heads three to four weeks earlier than home-grown hotbed or coldframe plants.

To get the full advantage of these **Frost-proof Cabbage** plants they must be planted four to six weeks earlier than you can set out home-grown plants. These plants will be somewhat wilted and have a hard, stunted appearance when they arrive at destination, but, regardless of appearance, they will produce the desired crop results.

We are authorized by the growers to make this offer: "We guarantee plants to reach your customers in good condition, and to produce satisfactory crop results. If they fail to do so, you are authorized by us to refund the purchase price."

Varieties: Early Jersey Wakefield, Charleston Large Wakefield, Succession, and Early Flat Dutch.

Prices: 35 cts. per 100, by mail, postage paid. By express, buyer paying express charges (which under special rates, are very low) 500 plants for \$1; lots of 1,000 to 4,000, \$1.50 per 1,000. Special prices for larger quantities. Place your orders early.

ALL VARIETIES IN CAPITAL LETTERS ARE GENUINE GENESEEE STOCK

Genesee Early Prize Cauliflower

CARROT

One ounce to 100 feet of row

Sow seed in finely cultivated ground as soon as it becomes warm and settled in spring. In garden planting, put seed 1/2 inch deep in rows 15 inches apart, and thin to 5 inches apart in the row. Avoid sowing on newly manured ground, as it tends to produce forked roots.

SELECTED EARLY SCARLET. Best early variety, either for forcing or outdoor planting.

GENESSEE HALF-LONG. A handsome cylinder-shaped Carrot, smooth; flesh of fine texture, with little core, and a heavy producer. Oz. 10 cts., 1/4 lb. 25 cts., lb. 80 cts.

GENESSEE THICK-SET. This variety resembles somewhat the last named, but has a larger diameter, hence its name. For planting where the soil is not very deep and the subsoil stiff it has no equal. In fact, it is an exceedingly desirable variety, giving a large outturn of roots excellent for either table or stable. Oz. 10 cts., 1/4 lb. 25 cts., lb. 80 cts.

IMPROVED LONG ORANGE. A very desirable Carrot for garden or field culture. Oz. 10 cts., 1/4 lb. 25 cts., lb. 80 cts.

Guerande, or Oxheart. A good Carrot for table use or stock-feeding. Oz. 10 cts., 1/4 lb. 25 cts., lb. 80 cts.

CAULIFLOWER

One ounce for 2,000 plants

An extra-rich soil is essential for the successful cultivation of this delicious vegetable. Plant and cultivate the same as for cabbage, watering liberally during dry weather. Liquid manure is beneficial.

NOTE.—We have this year imported our Cauliflower seed direct from the Holland grower, so as to avoid the risks of getting it through second hands.

GENESSEE EARLY PRIZE. The earliest and most reliable variety. A sure header. Under favorable conditions every plant will form a large, solid, perfect head of the finest table quality. Fine for planting in succession throughout the season, as it is equally good for early or late planting. 1/4 pkt. 10 cts., full pkt. 25 cts., oz. \$2.50

Early Snowball. Good but not equal to the former. Full pkt. 20 cts., oz. \$1.50.

CELERY, French Stock

One ounce will produce 2,000 plants

Sow in the open ground as soon as it is fit to work in April. In June or July transplant into rows 3 feet apart for the dwarf varieties, 4 feet for the larger sorts and from 6 to 9 inches apart in the row. In transplanting, be careful to keep the ball of soil attached to the roots, and in setting the plant in the trench, press the earth firmly about the roots with the foot. In dry weather, water liberally, using liquid manure occasionally. About August 15, begin earthing up, taking care to prevent the soil falling into the heart of the plant. Continue this until the plants are thoroughly blanched.

The best early variety of Celery is the **Improved White Plume**, which blanches readily without much earthing up. It is crisp and fine-flavored and very satisfactory for fall and early winter use. Follow this with the **Golden Self-blanching**, a Celery of superior quality. It blanches to a waxy golden color, is solid and crisp, with a rich nutty flavor. While a better keeper than the **White Plume**, it should be used during the early winter months. For winter and spring use the three most desirable varieties are the **Genesee Dwarf Golden**, **Genesee Giant** and **Winter Queen**. The first of these has a unique character and quality. Along in the winter, when it has been thoroughly blanched, the stalks are brittle to the touch and are crisp and nutty beyond comparison. The **Genesee Giant** is the one very large Celery that is always satisfactory when properly earthed up and blanched. Large vegetables are frequently coarse and of inferior quality, but the broad, thick stalks of the **Genesee Giant** Celery are crisp and fine-flavored to the highest degree, and form attractive bunches readily marketable at good prices. The **Winter Queen** is a variety of beautiful appearance and extra-fine quality, and excels as a long keeper.

Genesee Giant Celery

Price-List of All Varieties of Celery

	Oz.	1/4 lb.	Lb.
IMPROVED WHITE PLUME. For early use; very desirable	\$0 20	\$0 60	\$2 00

Giant Pascal. A large winter Celery, blanching well.....	15	40	1 40
Flavoring. Good clean seed for use in soups and relishes...	05	15	45

SUGAR CORN Connecticut-Grown

One quart for 200 hills

Plant in hills 3 to 4 feet apart each way, according to the variety, or in drills 4 feet apart, and about 9 inches apart in the row. Be sure to put in plenty of seed, and be equally sure to thin out, so that there will not be more than three stalks to the square yard. Break off all side shoots. The Adams may be planted early in April, but it is a great mistake to plant the Sugar varieties until the ground is thoroughly warm.

There are unquestionably many excellent varieties of Sugar Corn, but if we were asked to select two varieties that would cover the whole season's needs and give the most satisfactory results under all conditions, we would unhesitatingly name **Genesee Early Sugar** and **Improved Evergreen**. The first-named produces larger ears than other varieties of early Sugar Corn, in fact nearly as large as the late varieties. It is very hardy, and may be planted almost as early as the Adams and other like varieties, while it surpasses them so far in quality that they are unsalable as soon as the **Genesee Early** comes on the market. The **Improved Evergreen** is a type of the Stowell's Evergreen that has been developed by following in the footsteps of Mr. Stowell in the evolution of his variety. The Stowell's Evergreen, as now generally sold, has deteriorated in some respects and it was necessary to get back nearer to the original type. This has been accomplished in **Improved Evergreen**.

Price-List of All Varieties of Corn

Pints and quarts will be sent by mail, postpaid

	Pt.	Qt.	Pk.	Bus.
GENESEEE EARLY SUGAR. Large ears; very sugary. Plant early and often.	\$0 15	\$0 25	\$1 20	\$4 50
NEW ENGLAND SUGAR. Medium early; very productive; extra-fine quality.	15	25	1 20	4 50
COUNTRY GENTLEMAN. Sweetest; medium size; grains small, set irregularly.	15	25	1 20	4 50
IMPROVED EVERGREEN. Best Sugar Corn in all respects. Do not plant early.	15	25	1 20	4 50
MAMMOTH SUGAR. An excellent variety for late planting; very large, sweet ears.	15	25	1 20	4 50
Adams' Extra-Early. Small ears; first in the market. Not Sugar Corn.	12	20	80	3 00
Adams' Early. Larger ears, a week later. To sell it, it must come before Sugar Corn.	12	20	80	3 00
Stabler's Early. A good early Sugar Corn; good-sized ears.	15	25	1 10	4 00
Golden Bantam. Early; medium ears; yellowish grain; sweet.	15	25	1 20	4 50
Squantum. Medium-early variety; large, thick ears; fine quality.	15	25	1 10	4 00
Stowell's Evergreen. The standard variety. This is a first-class strain.	15	25	1 00	3 50
Late Mammoth. A standard late variety. Extra-large ears; good quality.	15	25	1 10	4 00
White Rice Pop Corn. Produces pearl-white ears with pointed grains.	15	25	1 10	4 00

Improved Long Green Cucumber

CUCUMBER

One ounce to
50 hills

Cucumbers succeed best in warm, rich, sandy loam. Do not plant in the open ground until there is a prospect of settled warm weather. Plant in hills 4 feet apart each way, prepared previously by mixing thoroughly a shovelful of well-rotted manure with the soil in each hill. When all danger from insects is past, thin out the plants, leaving three or four of the strongest to the hill. Most Cucumbers may be used both for slicing and pickling, but the two varieties that surpass all others for slicing are the **Improved White Spine** and the **Improved Long Green**. They excel in all desirable points. The best for pickles only is the **Genesee Pickle**.

Price-List of All Varieties of Cucumber

	Oz.	¼lb.	Lb.
GENESEEE SHORT GREEN. For hothouse or early outdoors. Fine sliced and for pickles.	\$0 10	\$0 25	\$0 80
IMPROVED WHITE SPINE. The best variety for early planting.	10	25	80
IMPROVED LONG GREEN. For main-crop planting it is unequaled.	10	25	80
GENESEEE PICKLE. The variety that produces the "perfect pickle"	10	25	80
EVERBEARING. Will continue bearing through a long season. Good pickles.	10	25	80
GHERKIN, or BUR. Very prolific; small fruits thickly covered with spines.	15	50	1 50
Early Frame. A good early variety for slicing or pickles.	10	25	70
Jersey Pickle. Largely grown for pickles; not equal to Genesee Pickle.	10	25	70
Green Prolific. A good pickling Cucumber; well-shaped fruit.	10	25	70

CORN SALAD

One ounce to 150
feet of row

Sow early in the spring in rows 1 foot apart. Ready for use in eight weeks. For spring use, sow in September, and winter over exactly as spinach.

Large-seeded. The best variety. Oz. 10 cts., ¼lb. 20 cts., lb. 60 cts.

CRESS

Extra-Curled, or Pepper Grass. Sow in the spring very thickly in shallow drills and repeat often, as it soon runs to seed. Oz. 10 cts., ¼lb. 20 cts., lb. 60 cts.

Water Cress. Requires running water or pond, where it grows with little care. Oz. 30 cts., ¼lb. \$1.

EGGPLANT One ounce for 1,000 plants

Sow early in the spring in hotbeds, or in window-boxes, and plant out after the weather becomes warm and settled, from 2 to 3 feet apart.

GENESEE EARLY BEAUTY. A variety of recent introduction that bids fair to displace every other kind. It is extremely early, maturing its fruit at least ten days before the New York Improved Large Purple, and thus commands the most desirable market period, while the whole crop comes to full size before being caught by frost. The skin is throughout a lustrous purplish black, giving great beauty to the large, finely shaped, solid fruit. The plants grow on broad, sturdy bushes, bearing abundantly. Pkt. 10 cts., oz. 35 cts., $\frac{1}{4}$ lb. \$1.10.

New York Improved Large Purple. A standard variety of good quality. Oz. 30 cts., $\frac{1}{4}$ lb. 90 cts.

ENDIVE One ounce to 150 feet of row

For early supply sow in April. The main sowings are made in June and July, in rows 1 foot apart. Thin out to 9 inches apart in the rows. When the plants are grown, gather up the leaves and tie together the tips with a string, thus blanching the inner leaves.

IMPROVED GREEN-CURLED. Much superior to the old type of Green Curled. Leaves finely cut and curled, giving the plant a rich, mossy appearance. The large, white heart is fleshy and tender. Equally good for early or late planting and may supersede every other kind. Oz. 15 cts., $\frac{1}{4}$ lb. 40 cts., lb. \$1.25.

Genesee Early Beauty Eggplant

GOURDS

These are plants that have the peculiar characteristic of producing seed-vessels that, when matured and dried, are useful for many household and farm purposes.

Japanese Nest-Egg. These exactly resemble the eggs of hens, making capital nest-eggs, as they do not break and are not injured by wet or cold. Quite ornamental. Oz. 15 cts., $\frac{1}{4}$ lb. 40 cts.

Dipper. Named for its resemblance to that utensil. The capacity varies from a quart to a pint, and the handle is 6 to 12 inches long. Oz. 15 cts., $\frac{1}{4}$ lb. 40 cts.

Sugar-Trough. This variety grows somewhat pear-shaped, and, by sawing off across near the middle, large dishes or buckets may be made, holding 2 to 10 gallons each. The shell, when dried, is light, but thick and hard, and will last for years. Oz. 15 cts., $\frac{1}{4}$ lb. 40 cts.

KALE One ounce for 2,000 plants

Sow the latter part of April or early in May, in prepared beds, covering the seed thinly and evenly. Transplant in June and treat like cabbage. The varieties are all hardy, and are best when touched with frost.

GENESEE GREEN CURLED. This is the best variety of Kale for productiveness, quality and beauty of appearance. The leaves are beautifully curled and wrinkled, of a bright green color, while the plant is hardy and will stand out uninjured through any cold weather not below zero. Oz. 10 cts., $\frac{1}{4}$ lb. 25 cts., lb. 70 cts.

Dwarf German Green. A well-known variety of good quality. Oz. 10 cts., $\frac{1}{4}$ lb. 20 cts., lb. 60 cts.

Green Curled Scotch. Good, but not equal to Genesee Green Curled. Oz. 10 cts., $\frac{1}{4}$ lb. 25 cts., lb. 70 cts.

Genesee Green Curled Kale

KOHLRABI

One ounce to 150 feet of row

A vegetable intermediate between the cabbage and the turnip. Sow seed in May or June, in rows 18 inches apart, thinning out to 8 inches apart in the rows. Culture is about the same as for turnips.

EARLY WHITE VIENNA. This produces early bulbs, rather small, but in great numbers, while the flesh is white, tender, and of finest quality. The very best of all varieties. Oz. 20 cts., $\frac{1}{4}$ lb. 50 cts.

LEEK

One ounce for 1,000 plants

Sow as early in the spring as practicable, in rows 1 inch deep and 1 foot apart. When 6 or 8 inches high, transplant to rows 10 inches apart each way, as deep as possible, so that the necks may be blanched.

LARGE AMERICAN FLAG. This is a strong-growing variety, producing large, thick stems of mild flavor. A particularly fine market variety, always bringing good prices. Oz. 15 cts., $\frac{1}{4}$ lb. 40 cts., lb. \$1.25.

Genesee Wonderful Lettuce

LETTUCE

One ounce for
3,000 plants

The seed may be sown in the open ground in mid-September and transplanted to coldframes as soon as large enough to handle, being wintered over the same as early cabbage. For setting out in the spring, sow the seed in hotbeds in February, or in coldframes in March. For the main crop, sow every three weeks from April 15 to August 15, in rows 1 foot apart, and thin out plants to 1 foot apart in the row.

GENESSEE EARLY CURLED. This variety does not form heads, but makes large, compact bunches of light green leaves with finely curled or fringed edges. Its delicious quality and handsome appearance make it the most popular non-heading market variety to come in late in the season after the head Lettuces are exhausted. It is useful also for outdoor planting early in the spring.

BIG BOSTON. This is a fine forcing variety for coldframes during the winter months, as it produces heads of very large size, and succeeds better in a cooler temperature than most forcing strains. The large heads are beautifully blanched and of superior quality. Heads well in the open ground during the cool weather of spring or fall, and is one of the earliest varieties in outdoor culture.

GENESSEE BUTTER. A variety of great value along the same lines as the one just described. The heads are not quite so large as the Big Boston, but they are very solid, buttery, white within and beautifully green without. Either the Genesee Butter or the Big Boston, if grown from seed of the Genuine Genesee Strain, sold under the seal shown on the front cover, may be relied upon to give the utmost satisfaction for winter forcing or early outdoor culture.

GENESSEE WONDERFUL, and IMPROVED HANSON are the two best varieties for outdoor culture for the general summer crop. The Wonderful produces the largest heads, and both yield the finest solid heads, with inner leaves exceedingly sweet, tender and crisp, and outer leaves light green and palatable, having no bitter taste, as is sometimes noticed in summer Lettuce. Both are sure headers and slow to run to seed. Neither of them is so desirable for forcing and early outdoor culture as Genesee Butter and Big Boston.

GENESSEE ICEBERG. A new variety that has shown splendid results for summer culture. It is unquestionably the most beautiful Lettuce in cultivation. The extremely solid heads are formed by closely infolding leaves, thoroughly blanched by their natural formation and exceedingly tender and crisp, even when matured in the hottest days of summer. Surrounding this head are large, curly leaves of a beautiful light green color.

Big Boston Lettuce

ALL VARIETIES IN CAPITAL LETTERS ARE GENUINE GENESSEE STOCK

MUSKMELON

(Cantaloup)

One ounce for 60 hills

Melons thrive best in a moderately enriched, light soil. After all danger of frost is over, plant the seed in hills 4 to 6 feet apart each way, 10 to 12 seeds to the hill. When well up, and all danger from insects is past, pull all but three or four plants. Pinch off the ends of the leading shoots to induce early fruiting.

Of all the varieties of Cantaloup on the market the two that we consider most desirable, especially for the home garden, are the **Improved Jenny Lind** and the **Genesee Golden Gem**. The Jenny Lind is the smaller of the two, and is known by the button that is more or less marked on the blossom end. Both varieties, in their improved strain, as here offered, are the highest type of the small, round melon of the most delicate and delicious flavor and both are good bearers. The most widely known melon is the **Rocky Ford**, but we do not consider it the equal, at least for this locality, of the **Genesee Golden Gem**. There are two varieties of medium size that will give the very best results either for the home or market-garden, viz., **Salmon-Flesh Genesee** and **Green-Flesh Genesee**. Among the large kinds two varieties excel—**Montreal Market** and **Bay View**. Both are great bearers and the quality is fine for such large melons.

Genesee Golden Gem Muskmelon

WATERMELON

One ounce for 30 hills

Treat the same as cantaloup, except that the seed should be planted twice the distance apart each way. We have no hesitation in naming the **Genesee Sweet** as the best Watermelon for the family garden or home market. The rind of this melon is thin and rather brittle, so that it is not satisfactory for shipping long distances but for home use and for nearby markets it has no equal. Two excellent melons for the market-garden, either for the home trade or for shipping, are the **Improved Dixie** and **Genesee Icing**. They resemble each other except in color of rind, the former being dark green, mottled, and the latter light green, mottled. Both are of excellent quality and desirable in every way. The great shipping melon is the **Triumph**. The rind is very dark green, and is hard and tough, making it sure to carry long distances without injury. It grows to very large size and its quality is superior to other large melons.

OKRA

One ounce for 100 hills

Sow late in the spring in drills 3 feet apart, and thin out to from 9 to 12 inches apart. Or it may be raised in hotbeds and transplanted. The pods, when young, are excellent for soups and stews.

DWARF GREEN PROLIFIC. An excellent variety of stocky growth; wonderfully prolific and much earlier than the taller varieties. Pods of good size and fine quality. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.

PERFECTED MAMMOTH-POD. A new variety of exceptional merit, producing pods of unusual length, of fine color, form and quality. The pods are so thickly set on the plants as to make the yield extraordinary. Oz. 10 cts., ¼lb. 20 cts., lb. 60 cts.

ONION

The Onion thrives best in a rather deep, rich, loamy soil. The ground should be prepared the previous autumn by plowing or spading in deeply a heavy dressing of well-rotted stable manure. As early in the spring as possible, work the ground until mellow and finely pulverized. Sow the seed in drills about 18 inches apart. Cover lightly with fine soil and press down with the back of a spade or a light roller; in larger operations use a seed drill. Keep the ground free from weeds, taking care not to cover the bulbs with dirt or disturb them by too close or careless working.

There are two methods of growing Onions. The most common method is to grow the small Onions, or "sets" one year, winter them over and put out these sets the next season. The other method, which is rapidly coming into favor, is to produce the large Onions in one season direct from the seed. As the growing of the sets is a business of itself, and is done on a large scale in certain localities, it is customary for most planters to buy their sets each season, as it is found to cost less than to undertake to grow them on a small scale.

To grow sets, sow in drills 30 to 40 pounds of seed to the acre. If sown thinner, the bulbs will grow too large. The best varieties to plant for sets are the **Yellow Dutch**, **Improved Silverskin**, and **Early Red**. These resemble each other in everything except color. Gather the sets in the fall, and winter over by spreading thinly on a dry floor, giving plenty of ventilation.

To grow large Onions direct from the seed, sow 5 to 6 pounds to the acre. After the plants are well set, thin out to about 3 inches apart in the row, so as to give the bulbs space to grow to full size. The yield will be enormous on rich ground if the right varieties are planted. The best varieties to plant for this purpose are the **Genesee Yellow Globe**, **Genesee White Globe**, and **Red Wethersfield**. All three varieties are of the very finest quality, produce immense crops of bulbs that will keep till the next season, and differ mainly in the color of the outside skin. There is also a slight divergence in form—the yellow and white are perfect globe-shaped, while the red is somewhat flattened in shape. Then there are two varieties that are planted for fall and early winter use, viz., the **Mammoth Yellow Prizetaker** and **Mammoth Silver King**. These produce immense Onions of the finest form and mild flavor, but are not long keepers. They should, therefore, be disposed of by the middle of the winter.

PARSNIP

One ounce to 200 feet of row

Sow as early in spring as weather will permit, in drills 15 inches apart, covering with fine soil ½ inch deep. When well up thin out to 6 inches apart in the row. The Parsnip is hardy, and may remain in the ground during the winter; indeed, the flavor is improved by frost.

GENESEE LARGE SUGAR. A wonderfully fine strain, resembling Hollow Crown, but producing a shorter root of larger diameter. Very heavy cropper; excellent sweet quality. Oz. 10 cts., ¼lb. 20 cts., lb. 60 cts.

Hollow Crown. The old standard variety. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.

PARSLEY

One ounce to 150 feet of row

Sow thickly early in April in rows 1 foot apart, covering lightly with fine soil; thin out the plants to 6 inches apart in the row. As the seed is very slow to germinate, sometimes taking three to four weeks, it is well to soak it a few hours in tepid water just before sowing. For winter use protect in a frame or light cellar.

GENESEE MOSS CURLED. A handsome and distinct variety, beautifully crimped and curled. The plant is of a very robust and free growth. It is the best kind for either private or market-garden. Oz. 10 cts., $\frac{1}{4}$ lb. 25 cts., lb. 80 cts.

Genesee Moss Curled Parsley

PEPPER

One ounce for 1,500 plants or 100 yards of row

Sow in the hotbed early in April, and transplant to the open ground as soon as the weather is warm and settled, in rows 18 inches apart. They may also be sown in open ground when danger of frost is past.

BULL NOSE. A large, early variety of pleasant flavor. The plant bears abundantly the pendent scarlet fruit, 2 to 3 inches long and about 2 inches in diameter. Pkt. 5 cts., oz. 20 cts., $\frac{1}{4}$ lb. 60 cts., lb. \$2.

RUBY KING. A favorite Pepper with all growers on account of its sure cropping and fine quality. Fruit nearly twice as large as the Bull Nose. The flesh is thick, sweet and mild. Especially fine for salads or stuffed for mangoes. Pkt. 5 cts., oz. 20 cts., $\frac{1}{4}$ lb. 60 cts., lb. \$2.

GENESEE MAMMOTH.

The name indicates the striking feature of this new variety. The Peppers are double the size of the Ruby King, and ripen very early for so large-fruited a variety. The plants are of vigorous, stocky growth, throwing out numerous branches, which are well set with the enormous fruits. The flesh is unusually thick, mild and sweet, making an excellent salad when sliced and served like tomatoes. Pkt. 10 cts., oz. 30 cts., $\frac{1}{4}$ lb. \$1.

Ruby King Pepper

PUMPKIN

One ounce to 20 or 30 hills

Usually planted in fields of corn or potatoes. If planted in a field by themselves, sow in late April or May, in hills 8 to 10 feet apart. Avoid planting them near other vines.

Of all the varieties of Pumpkins we recommend the following three kinds to grow for table uses: **Japanese Pie**, **Genesee Sweet Potato**, and **Genesee Golden**. The first-named resembles somewhat the well-known Cushaw, but the flesh is finer-grained, drier and more solid. The second is pear-shaped, the skin light yellow, flesh very thick, creamy white, dry and fine-grained. The **Genesee Golden** we think the best of all. In color and shape it resembles the yellow Hubbard squash and in fact, the Hubbard squash is one of its parents, but by judicious crossing and careful selection of stock the flesh has been made more solid and fine-grained with a peculiarly rich, sweet flavor all its own. It is one of the finest Pumpkins for culinary purposes, and is particularly valuable for pies. It makes a fine show on the market-stall and always brings the highest price. It is the most profitable variety to grow.

Genesee Golden Pumpkin

Connecticut Field. The large, yellow field Pumpkin, but not so large as Mammoth.....	10	10	30

ALL VARIETIES IN CAPITAL LETTERS ARE GENUINE GENESEE STOCK

PEAS

One quart to 100 feet of row

Peas delight in light, rich soil, and especially for the dwarf kinds the soil can hardly be too rich. For market-crop sow in rows 2 to 3 feet apart, and in private gardens in double rows, using brush or trellis for the tall varieties, covering the seed 2 to 3 inches deep. Sow the extra-earlies in March or earlier if the ground can be worked. The wrinkled kinds should not be planted until the ground is warmer, as they are liable to rot. Make plantings every two weeks as late as August, when the extra-earlies can again be sown for a fall crop.

The varieties marked with an asterisk (*) are wrinkled

EXTRA-EARLY PEAS

Of all the extra-early Peas that have been put on the market, past or present, there are none superior—in fact, we know of none quite equal—to the **Genesee Extra-Early** and the **Improved Alaska**. We have seen the former planted side by side with many other well-known and widely advertised extra-earlies, and the **Genesee Extra-Early** has always had some advantage over them, either in earliness, larger yield or better quality. As to the **Improved Alaska**, it is in a class by itself. The vines are vigorous and bushy, entirely free from runners, yielding an immense product of dark green pods, ripening uniformly, and completely filled with Peas of the finest flavor. Other strains of Alaska are frequently seen growing with long runners, short pods only half filled with Peas, which do not retain their green color like the **Improved Alaska** and therefore are not so marketable. These inferior strains have evidently become mixed with the green field Peas so largely grown in the Northwest.

About the same time that you plant the **Genesee Extra-Early** and **Improved Alaska**, be sure to plant a good-sized patch of the **Wonderful Pea**. This variety, hitherto known as the **New Early Pea**, has been most appropriately named. It is a wonderful Pea in many ways. If planted at the same time as the best extra-earlies just described, it comes into bearing about a week later than they do but its pods are 50 per cent longer, borne in great abundance and its Peas more wrinkled and of extra quality. One grower reports: "I planted the **New Early** [now **Wonderful**] a week later than the **Improved Alaska**, and it came into bearing a week earlier." This is noteworthy testimony, and indicates the unquestioned value of this new variety; but it is not probable that this would be a general experience. The **Improved Alaska** is the earliest Pea in cultivation (unless it be the **Genesee Extra-Early**), and we do not think it possible that the **Wonderful** could surpass it generally in point of earliness. It is as a quantity and quality Pea that the **Wonderful** takes the lead of all other earlies, and it might also be called an all-seasons Pea, as it can be planted to great advantage from April to August.

The best three early wrinkled Peas are the **Gradus**, **Excelsior** and **Genesee Gem**. The **Gradus** is in a class of its own and its popularity grows with each succeeding year. **Excelsior** is a wonderful little Pea; it grows only about 15 inches high, but the vines are literally covered with pods packed to the very ends with large, wrinkled Peas of the finest

quality. The **Genesee Gem** is a strain of **Little Gem**, and a great improvement over it.

MEDIUM-EARLY AND LATE PEAS

We recommend in this class three varieties, each having distinctive merits—**Genesee Advancer**, **Genesee Champion** and **Mammoth Sugar Marrow**. The first of these should be planted immediately after the early wrinkled varieties just described. It is one of those good, old-fashioned kinds, not particularly showy or extraordinary in any particular points, but dependable in every way. The **Genesee Champion** is a dwarf Champion of England, only 2 feet against its parent's 4 feet of height. Moreover, its pods are longer and better filled, and in every way it is a splendid variety, especially desirable for the private garden. The third variety, **Mammoth Sugar Marrow**, we could not recommend for the private garden, but for the market-gardener it reaches the highest mark. It is a most profuse bearer and its pods and Peas are of rich green which makes it an easy market seller. It will be no mistake for every trucker to plant his main crop in this variety. Do not forget, near the end of the season, to make two or three plantings of the **Wonderful Pea**.

RADISH French-Grown

One ounce to 100 feet of row

A light, rich soil, not recently manured, is best suited for Radishes. For early use, sow in a gentle hotbed in February, giving plenty of ventilation; otherwise they will run to leaves. For successive crops, sow in the open ground from March 15 to September. Quick growth is essential to insure tenderness; therefore adopt every expedient to force the growth.

RED RADISH

There are nearly a hundred varieties of Radish listed in the catalogues of different seedsmen. Of that large number we have selected an even dozen which seem to cover the whole situation and meet every need. We put at the head of the list the **Genesee Early Forcing** as the most satisfactory red Radish for forcing purposes and early outdoor planting. In twenty days from planting the seed this variety is ready for the table. It makes attractive bunches and is mild, crisp and fine-flavored. Next on the list for the earliest outdoor planting, are the two well-known and highly satisfactory varieties, **Scarlet Turnip White-tipped** and **French Breakfast**, alike in color and quality, but differing in shape. Then comes the **Genesee Long Bright Scarlet**, which is decidedly the best long red Radish for very early use and it may also be planted for a later summer Radish. But by all odds the best midsummer Radish is the **Chartier's Improved**. It stands the summer heat remarkably well, does not get pithy, as so many Radishes do late in the season, but remains crisp and mild, under even adverse conditions. For late planting the **Genesee Red Winter** has no superior, and no other need be considered in comparison.

Genesee Long Bright Scarlet Radishes

WHITE RADISH

The best white Radish for forcing or early outdoor planting is the **Genesee White Box**. This is a round Radish of beautiful form and color, ready for the table in three weeks from sowing the seed; flesh always firm and crisp, with mild flavor. A splendid companion to this variety is the **Genesee Icicle**, which merits every word of praise that may be given it. The name indicates its shape, and its clear white skin and crisp flesh make for it a universal demand. It may be planted to advantage for the earliest outdoor crop or for later use. The three most desirable summer Radishes are the **Strasburg Improved**, **Large White Globe**, and **Golden Globe**. The first-named is of medium length, with crisp, firm flesh, and is distinctly the best white summer Radish on the market. The **Large White Globe** and **Golden Globe** are both excellent summer Radishes, retaining their good quality in spite of the heat. They are alike in shape. The former has white skin and flesh and the latter yellowish brown skin and yellowish white flesh. For late planting the **Genesee White Winter** is in a class by itself, very large but not coarse-grained, mild, tender and juicy.

Price-List of All Varieties of Radish

	Oz.	1/4lb.	Lb.
GENESEE EARLY FORCING. A 20-day Radish; crisp and mild.	\$0 10	\$0 25	\$0 70
SCARLET TURNIP WHITE-TIPPED. Best for early outdoor planting.	10	20	60
FRENCH BREAKFAST. The best early, olive-shaped Radish.	10	20	60
GENESEE LONG BRIGHT SCARLET. Attractive; always crisp and mild.	10	20	60
CHARTIER'S IMPROVED. Medium-long, resisting heat, keeping crisp.	10	20	60
GENESEE RED WINTER. Half-long; rose-color; flesh white and firm.	10	20	60
Early Scarlet Turnip. A standard round Radish of good quality.	10	20	50
Early Long Scarlet Short-Top. A well-known Radish for early use.	10	20	50
China Rose Winter. An old standby for winter use.	10	20	50

WHITE AND BLACK RADISH

GENESEE WHITE BOX. Best round white for early planting.	10	25	70
GENESEE ICICLE. A beautiful long Radish; clear white; finest quality.	10	25	70
STRASBURG IMPROVED. Medium-long; stands heat well; crisp, mild.	10	20	60
LARGE WHITE GLOBE. The best of its type, keeping crisp despite heat.	10	20	60
GOLDEN GLOBE. Qualities like the former, differing only in color.	10	20	60
GENESEE WHITE WINTER. Medium length; large size; fine quality.	10	20	60
Long White Vienna, or Lady Finger. Quite popular.	10	20	50
Celestial, or White Chinese. A very large, late Radish.	10	20	50
Round Black Spanish. The favorite with the Germans.	10	20	50
Long Black Spanish. Skin black, but flesh white; good keeper.	10	20	50

SQUASH One ounce to 40 hills

Like all vegetables of this character, sow only when the weather has become warm and settled. Plant in well-manured hills, in the same manner as cucumbers and melons—the bush varieties 3 to 4 feet apart each way, and the running kinds from 6 to 8 feet. Plant 8 to 10 seeds to each hill, thinning out, after the danger from bugs is over, to three or four of the strongest plants per hill.

In our judgment the following four varieties of the Squash may be selected as the most desirable, and other kinds left out of account. For early planting take the two best varieties of the Pattypan type—**Silver Custard** and **Golden Custard**. For summer planting for fall and winter use, take the **Genesee Giant Crookneck** and **Genesee Red Hubbard**. Heretofore we have listed several other varieties, but these four are so superior and cover the ground so completely that we have omitted all others.

Price-List of All Varieties of Squash

	Oz.	¼lb.	Lb.
SILVER CUSTARD. The best white Pattypan; very productive; quality fine.....	\$0 10	\$0 25	\$0 80
GOLDEN CUSTARD. The best yellow Pattypan; rich orange-yellow.....	10	25	80
GENESEE GIANT CROOKNECK. A great improvement over the old Crookneck in size, color and quality.....	10	25	80
GENESEE RED HUBBARD. The best of the Hubbard type; fine quality; great producer.	10	25	80

SALSIFY, or OYSTER PLANT

One ounce to 50 feet of row

Sow early in the spring, in deep, mellow soil, in rows 15 inches apart, covering 1 inch deep with fine soil. Thin out to 6 inches apart in the row.

MAMMOTH SANDWICH ISLAND. This is the only variety of really great merit. Salsify is a delicious and nutritious vegetable and should be more largely grown for winter use and sale, as it requires no more care and labor than carrots or parsnips. The roots, when sliced and fried, resemble the real oyster. Oz., 15 cts., ¼lb. 35 cts., lb. \$1.25.

SPINACH One ounce to 100 feet of row

For main-crop, sow in September, and in exposed places cover lightly with straw or salt hay. For summer use it may be sown at intervals of two or three weeks from April to August. Spinach is best on rich soil.

GENESEE THICK-LEAF. The name clearly indicates the character and quality of this fine Spinach. It is the earliest and quickest growing of all the varieties, very hardy, productive and of excellent quality. Oz. 5 cts., ¼lb. 10 cts., lb. 35 cts., 5 lbs. \$1.50.

Bloomsdale Savoy. A standard variety, prolific and of good quality. ¼lb. 10 cts., lb. 30 cts., 5 lbs. \$1.25.
Long-standing. Slow to run to seed. Desirable for spring planting. ¼lb. 10 cts., lb. 30 cts., 5 lbs. \$1.25.

TURNIP One ounce to 150 feet of row

For early Turnips sow as soon as the ground can be worked in spring. For winter use, sow from July 15 to August 31. Turnips are generally sown broadcast, but larger crops are obtained by cultivating in drills 18 inches apart and thinning to 6 inches.

Improved Purple-Top White Globe Turnip

Of all the white-fleshed Turnips there is none the equal of the **Improved Purple-Top White Globe** either for table use or for stock-feeding. The roots grow to large size, round, handsome form, flesh white, firm, and fine-grained. They will keep the entire winter, retaining their solidity and fine quality. Of the yellow-fleshed varieties, the **Golden Ball** is an excellent table Turnip of medium size and unsurpassed quality, and the **Large Amber Globe** is the mate of the White Globe described above and may be planted either for table use or stock-feeding. Of Rutabagas, decidedly the best is the **Long Island Rutabaga**, which excels in form, size, handsome appearance, solidity, long-keeping quality and rich flavor.

Price-List of All Varieties of Turnip

- IMPROVED PURPLE-TOP WHITE GLOBE.** As described above. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- GOLDEN BALL.** Particularly fine for table use; not a heavy producer. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- LARGE AMBER GLOBE.** Best yellow Turnip for all purposes; heavy yield. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- Purple-Top Flat, or Strap-leaved.** A well-known early white Turnip. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- Cow Horn.** Long; white; grown for feeding stock. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- White Egg.** An oval-shaped white Turnip; good average quality and productive. Oz. 10 cts., ¼lb. 20 cts., lb. 50c.
- Yellow Aberdeen.** A large, globe-shaped Turnip, grown mainly for stock. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- Southern Seven Top.** Grown in the South for winter greens. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- LONG ISLAND RUTABAGA.** Plant this variety only, as it excels all others. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.
- Purple-Top Yellow Rutabaga.** The old standard variety, not equal to the Long Island. Oz. 10 cts., ¼lb. 20 cts., lb. 50 cts.

TOMATO

One ounce for
1,200 plants

Sow seed in a hotbed, greenhouse or window-box in a sitting-room, where the night temperature is not below 60 degrees, about March 1, covering it half an inch deep. When the plants are about 2 inches high they should be set out in boxes, or another hotbed, at the same temperature. About May 15, the plants may be transplanted into the open ground 3 feet apart each way, in hills in which a good shovelful of rotted manure has been mixed. A light, somewhat sandy soil is best suited to Tomatoes, especially for the first crop. On heavy soils, put the plants about 4 feet apart each way.

Of the many different varieties of Tomatoes, we do not hesitate in naming as leaders the **Genesee Early Dawn**, for early planting, and the **Scarlet Beauty** for the main crop. Early varieties as a rule produce small, knotty fruit, sour and seedy, undesirable for the home table, unsalable in market; but the **Genesee Early Dawn** is just the reverse of this. It is the earliest large Tomato in cultivation, coming into market as early as the small, acid fruit of the so-called extra-early varieties, and at least two weeks earlier than any other kind its equal in size and quality. This makes all the difference between profit and loss, for there is no glut on this early market, and prices are always good. For the main crop, the **Scarlet Beauty** is unequalled and should be largely planted in every private and market-garden. The vines are vigorous growers right up to frost, and produce in great abundance the large, handsome fruit, deep scarlet, almost cardinal in color, and so firm and solid that the ripe fruit will remain in marketable condition an unusually long time after picking. After **Scarlet Beauty**, the next choice for the main crop is the **Perfected Stone**, which is the finest strain of Stone Tomato, much superior to the ordinary type.

Scarlet Beauty Tomato

Price-List of All Varieties of Tomato

	Oz.	1/4lb.	Lb.
GENESEE EARLY DAWN. Very early; large-fruited; bright red; firm; extra quality.....	\$0 25	\$0 75	\$2 50
EARLY PARAGON. Popular with canners; vigorous grower; heavy yield; good quality.....	20	50	1 75
SCARLET BEAUTY. For main crop has no equal. Deep scarlet; large, solid fruit.....	20	60	2 00
PERFECTED STONE. As the name indicates, a highly improved strain of this old favorite.....	20	50	1 75
Sparks' Earliana. A much-praised new variety; large and early.....	20	60	2 00
Acme. The standard variety of a purplish pink color.....	20	50	1 75
Matchless. A good Tomato of bright red color.....	20	50	1 75
Truckers' Favorite. A standard purple variety; large-fruited and solid.....	20	50	1 75
Beefsteak. Not a distinct variety, but a common name applied to different kinds.....	20	50	1 75
RED PEAR. Yields a profusion of little red Tomatoes; fine for pickles.....	20	60	2 00
YELLOW PEAR. Like the Red except in color. Tends to grow more olive-shaped.....	20	60	2 00

Sweet Basil

Sage

Sweet Marjoram

Summer Savory

Thyme

HERBS

Herbs are valuable for many medicinal and culinary purposes, especially for flavoring soups and sauces. They are easily grown and are ready for use at any season of the year.

	Pkt.	Oz.
The following varieties are kept only in the highest grade of seed and sold in sealed bags only:		
Anise. Used for garnishing and flavoring; the seeds have an agreeable aromatic taste.....	\$0 05	\$0 10
Caraway. Grown for the seeds, which are used for the flavoring of pastry, etc.....	05	10
Dill. The seeds have an aromatic odor and pungent taste. Used as a condiment.....	05	10
Sage. The most extensively used of all herbs for seasoning and dressing.....	05	15
Sweet Basil. The leaves are used for flavoring soups and stews.....	05	15
Sweet Marjoram. The leaves and the ends of the shoots are desirable for seasoning in summer and also dried for winter use.....	05	15
Summer Savory. The leaves and flowers are used for flavoring, particularly in soups and dressings.....	05	15
Thyme. Very desirable for seasoning, using the leaves and young shoots.....	05	30

SELECTED FLOWER SEEDS

In this department we make a specialty of Sweet Peas and Nasturtiums of the superb **Genuine Genesee** strain. We keep these in quantity and can fill immediate orders. We do not carry in stock the vast assortment of Flower Seeds that are offered to the public, but we have concluded to give our beautiful Sweet Peas and Nasturtiums the companionship of other desirable Flower Seeds. A list of these is given below.

Spencer Sweet Peas

SWEET PEAS **Short crop**

Plant early in the spring in ground well enriched by manure the previous season, raking in just before planting three pounds of High-Grade Guano to every 10 feet of row, or five pounds if the soil has not been manured. Do not plant on clayey or gravelly soil.

One ounce will plant 10 feet of single row, a pound 75 feet of double row

With every year, new varieties of Sweet Peas are added to the already long list. Some of these new introductions have real merit and are worthy companions in a beautiful sisterhood. Others are almost identical with old varieties, and being new only in name, are unnecessary additions. Others still are so decidedly inferior to kinds of many years' standing that they may be summarily rejected. In this sifting process it has been found best to drop many old varieties that have not been wholly satisfactory, either from point of beauty or vigor of plant-life. The most striking and beautiful results are obtained by planting Sweet Peas properly blended as to color. Our mixtures are made with that thought in view and only harmonious colors are used.

OUR SUPERB BLEND. Made from the finest varieties of the **Genuine Genesee Strain**, including all new varieties of real merit. An artistic color-blend. Pkt. 5 cts., oz. 10 cts., 1/4 lb. 25 cts., lb. 75 cts.

SPENCER BLEND. Made from Spencer types only. Pkt. 10 cts., oz. 20 cts., 1/4 lb. 50 cts., lb. \$1.50.

NASTURTIIUMS

Plant late in the spring, one ounce to 10 feet of row

Every year adds new varieties to this charming annual, some of decided merit, others inferior to the old sorts. The most beautiful and striking results are obtained by planting the fancy mixed varieties in masses, but not the tall and dwarf in the same bed. The Nasturtium will flourish on almost any soil and in any season. Do not make the soil too rich, as it will tend to produce foliage instead of flowers.

SUPERB BLEND, TALL VARIETIES. This is the **Genuine Genesee Strain** of all the most beautiful and vigorous of the tall varieties. Mammoth pkt. 5 cts., oz. 10 cts., 1/4 lb. 25 cts., lb. 75 cts.

SUPERB BLEND, DWARF VARIETIES. Dwarf-growing; most exquisite colors and markings. Mammoth pkt 5 cts., oz. 10 cts., 1/4 lb. 25 cts., lb. 75 cts.

LIST OF OTHER DESIRABLE FLOWER SEEDS

	Pkt.	1/4oz.	Oz.
ASTERS, Semi-Dwarf Varieties. Fancy mixed colors.....	\$0 05	\$0 25	\$0 80
Tall-branching Varieties. Finest mixed.....	05	30	1 00
BALSAM (Lady's Slipper), Double Camellia-flowered.....	05	20	60
COSMOS, Mammoth-flowering. Fancy mixed colors.....	05	10	30
GAILLARDIA (Blanket Flower), Grandiflora type. Finest mixed.....	05	20	60
MARIGOLD, African Type. Large-flowering; showy.....	05	10	25
French type, Legion of Honor. Dwarf; free-flowering.....	05	10	30
PANSY, Large-flowering. Many beautiful and varied colorings.....	05	30	1 00
PHLOX Drummondii grandiflora. Large-flowering. Mixed colors.....	05	25	80
RICINUS (Castor-Oil Bean). Large plants; gigantic leaves, beautifully marked.....	05	10	20
SCARLET SAGE. Large spikes; bright scarlet. Plant in beds.....	05	40	1 25
"Bonfire." Most brilliant scarlet flowers.....	10	75	2 75
SNAPDRAGON, Large-flowering. Finest mixed colors.....	05	15	50
SWEET ALYSSUM, "Little Gem." Beautiful, compact, snowy masses.....	05	15	50
SWEET WILLIAM, Dwarf Compact. Single; beautiful. Mixed.....	05	15	40
Giant-flowered. Extra fine; double. Mixed.....	05	20	60
ZINNIA, Mammoth-flowered, Double. Mixed colors.....	05	20	60
JAPANESE FLOWER-GARDEN. Many varieties of beautiful, old-fashioned flowers.....	05	10	25

GRASSES FOR SPECIAL PURPOSES

Aside from the sowing of Grass and Clover Seed for hay, there are many special purposes to be attained which may be classified as follows:

For Lawns
For Shady Places
For Golf-Links—Putting-Green

For Golf-Links—Fair Green
For Permanent Upland Pastures
For Permanent Meadow Pastures

To secure the desired result in any of these cases, no single variety of Grass Seed will answer. There must be a mixture of many varieties, and in exactly the right proportion, to obtain the greatest success, and this must be based on thorough knowledge and careful trials. We have taken as our basis the accurate experiments made by the Agricultural Department at Washington, extending over a series of years, and the resulting mixtures as listed below are thoroughly dependable.

	Qt.	Pk.	Weight per bus.	Bus.
Brandywine Park Lawn Seed. Made up of selected and re-cleaned seed of the choicest, fine-bladed Grasses, domestic and imported, to which is added the proper proportion of the best grade of White Clover. It will make a velvety lawn from early spring to late fall. The weight per bushel is 50 per cent above the standard. One quart to 25x25 feet; two bushels to the acre.....	\$0 20	\$1 00	(21 lbs.)	\$3 50
Evergreen Lawn Seed. Exactly the same as the last except that the White Clover is omitted. One quart to 25x25 feet; two bushels to the acre.....	15	90	(20 lbs.)	3 00
For Shady Places. The varieties used are those that do well in the shade of trees. As they are shy seeders the price of this mixture is always high. One quart to 20x20 feet; three bushels to the acre.....	25	1 40	(16 lbs.)	5 00
For Golf-Links—Putting-Green. Very fine, dwarf Grasses are used for this purpose, making a close, firm and very enduring turf. No better mixture for the purpose can be made. One quart to 20x20 feet; three bushels to the acre.....	25	1 40	(24 lbs.)	5 00
Golf-Links—Fair Green. Less expensive and stronger-growing Grasses are used in this case. It makes a permanent sod withstanding the hardest use. One quart to 25x25 feet; two bushels to the acre.....	15	1 00	(24 lbs.)	3 50
Permanent Upland Pasture. Made up of varieties that are nutritive to stock of all kinds, and stand the test of dry weather in the naturally dry upland soil. One quart to 25x25 feet; two bushels to the acre.....	15	1 00	(24 lbs.)	3 50
Permanent Meadow Pasture. General purpose same as the last, but under different conditions and, therefore, requiring entirely different Grasses. One quart to 25x25 feet; two bushels to the acre.....	15	1 00	(24 lbs.)	3 50

Unfortunately, there is a demand for cheaper Lawn Seed than the kinds described above. We therefore list, but do not recommend, a mixture which may be called

Philadelphia Lawn Seed. A type of Lawn Seed sold by a few Philadelphia dealers and highly recommended by them. The weight per bushel indicates its value. One quart to 20x20 feet; 3 bushels to the acre.....	15	70	(16 lbs.)	2 25
--	----	----	-----------	------

General List of Grass and Clover Seeds

It is a great pleasure to note the broadening of the demand every year for the highest grade of seed. It has been a hobby with us ever since we first introduced the **Genuine Crown Field Seed**, which stands the test of the highest government standard.

Nothing that we sell is a greater source of satisfaction to us than our **Crown Field Seed**. We know that the buyer can get nothing better, and if he gets elsewhere anything as good, he pays the same or more for it.

Every bag of the **Genuine Crown Field Seed** is sealed with a green label or tag printed as below. None genuine unless thus sealed

This label (or tag) sealing a package is a guarantee that it contains the

Genuine Crown Field Seed

of the variety named on the face of this package or on the back of the tag

VARIETIES OF FINE-LEAVED GRASSES

The varieties printed below in **heavy capitals** are the **Genuine Crown Field Seed**.

	Qt.	Pk.	Weight per bus.	Bus.
KENTUCKY BLUE GRASS. A most valuable Grass, suited to almost any kind of soil and climate. The legal weight per bushel of Kentucky Blue Grass Seed is 14 pounds. Note the weight of this Genuine Crown grade, showing its superb quality.....	\$0 15	\$0 80	(21 lbs.)	\$2 50
Kentucky Blue Grass. Our second grade, much superior to the standard grade.....		60	(18 lbs.)	2 00
Kentucky Blue Grass. This is the standard grade.....		40	(14 lbs.)	1 40
NOTE.—There is a still lower grade of Kentucky Blue Grass seed. It is mostly chaff. We do not keep it. You do not want it.				
RED-TOP, or HERD'S GRASS. A valuable pasture Grass that will succeed almost everywhere. It is extremely hardy, and withstands adverse weather conditions remarkably well. Note the weight of this Genuine Crown Seed , as compared with the standard—more than double.....	25	1 50	(32 lbs.)	5 50
Red-Top, or Herd's Grass. Our second-grade; too good for "Cheap John" markets.....		1 00	(21 lbs.)	3 50
Red-Top, or Herd's Grass. Our third grade is the standard market grade....		50	(14 lbs.)	1 75
NOTE.—There is still a lower grade of Red-Top Grass seed that is largely sold. It is mostly chaff. We do not keep it. You do not want it.				
CREEPING BENT. This is a fine Grass; makes a close turf.....	35	2 00	(18 lbs.)	7 00
RHODE ISLAND BENT. Similar to the Creeping Bent; very hardy.....	35	2 00	(18 lbs.)	7 00
CRESTED DOG'S-TAIL. One of the best of the fine short Grasses, especially for dry, hilly ground, as it withstands drought remarkably well.....	25	1 60	(20 lbs.)	6 00
SHEEP'S FESCUE. This Grass in a pasture makes it particularly relished by sheep; in fact, all stock is fond of it, and it is very nutritious.....	15	80	(14 lbs.)	3 00
FINE-LEAVED FESCUE. Similar to the Sheep's Fescue, but with much finer leaves and making closer turf.....	25	1 50	(14 lbs.)	5 50
RED FESCUE. All the Fescues are hardy, but this variety is the hardiest of all, keeping green even in extremely dry weather.....	20	1 00	(14 lbs.)	3 50
HARD FESCUE. Another variety of very enduring character, somewhat resembling those just described.....	15	80	(14 lbs.)	3 00
WOOD MEADOW. Particularly well adapted to moist, shady places.....	35	2 00	(14 lbs.)	7 00

VARIETIES OF COARSER-LEAVED GRASSES

The varieties printed below in **heavy capitals** are the **Genuine Crown Field Seed**.

	Qt.	Pk.	Weight per bus.	Bus.
TIMOTHY. The great variety for hay, producing good crops on nearly all soils and giving a very heavy out-turn when all conditions are favorable. Should be cut for hay soon after flowering, as it grows hard and dry when fully ripe and is not so desirable, especially when it is intended to bale and market it. This is the Genuine Crown Seed , sold only in sealed bags, and it has no equal.....	\$0 20	\$1 30	(45 lbs.)	\$4 75
Timothy. Our second grade. It is called Fancy or Choice in most markets....		1 20	(45 lbs.)	4 50
ORCHARD GRASS. A fine pasture Grass, and also good for hay if cut before getting too ripe. It succeeds on almost any soil, and is the first Grass to provide good pasture in the spring. It is not injured by close cropping; in fact, does better if not allowed to grow too tall and coarse in grazing fields. Note the weight per bushel of this Genuine Crown Seed	15	1 00	(18 lbs.)	3 75
Orchard Grass. Our second grade, sold generally as the best seed. This is the standard grade, testing the legal weight, 14 pounds per bushel.....		75	(14 lbs.)	2 75
ENGLISH or PERENNIAL RYE GRASS. This variety might be classed under the Fine-leaved Grasses, as it has that character in its English home. In this country it does well only on rather moist, heavy soils, where it grows somewhat coarser than in its original soil and climate.....	10	50	(21 lbs.)	1 75

VARIETIES OF COARSER-LEAVED GRASSES, continued

	Qt.	Pk.	Weight per bus. (18 lbs.)	Bus.
ITALIAN RYE GRASS. This variety gives excellent herbage early in the spring.	\$0 10	\$0 50		
CANADIAN BLUE GRASS. Of somewhat the same character as Kentucky Blue Grass, but is more wiry. It is a good Grass for poor, thin soils.	10	60	(18 lbs.)	2 00
MEADOW FOXTAIL. This Grass resembles Timothy. It is not so good for hay but is a better pasture Grass, especially on moist, heavy soils.	20	1 20	(10 lbs.)	4 25
MEADOW FESCUE. A rather coarse-growing Grass, but making excellent pasturage on moist, stiff soils. It is greedily eaten when green by stock.	20	1 10	(20 lbs.)	4 00
GERMAN or GOLDEN MILLET. A valuable annual for hay or green forage. This Genuine Crown Seed will outyield all other grades two to one.	15	80	(50 lbs.)	3 00
German or Golden Millet. Our second grade, generally sold as the "Best" seed. It will give a smaller yield than the Genuine Crown Seed .		70	(50 lbs.)	2 50
HUNGARIAN MILLET. An annual, very largely planted for green forage or hay. It is a quick-growing crop, giving a good yield.	10	60	(48 lbs.)	2 00
Hungarian Millet. Our second grade. Sold generally as the "Best" seed.		50	(48 lbs.)	1 75

VARIETIES OF CLOVER

The varieties printed below in **heavy capitals** are the **Genuine Crown Field Seed**.

	Oz.	¼lb.	Lb.
WHITE DUTCH. The fine dwarf Clover used on lawns.	\$0 08	\$0 20	\$0 60
White Dutch. Our second grade, sold elsewhere as the "Best".		15	50
MEDIUM RED. The leading variety for hay or pasture, although Alsike is beginning to dispute the title for the latter purpose. So much seed of this variety is put on the market, of apparently good quality, so far as indicated by a casual inspection, but greatly inferior in germinating power, owing to imperfectly developed seeds, that we are now offering our customers only the Genuine Crown Seed (sold in sealed bags) unless they insist on something cheaper. We will guarantee that 4 quarts of Genuine Crown Seed will give a better stand of Clover per acre than 5 quarts of the seed usually sold by dealers, all other conditions being exactly alike. Therefore, as a matter of dollars and cents, it really costs less to use Genuine Crown Seed . No Crown Seed is genuine unless sealed with a tag or label as shown on page 18.	\$0 55	\$3 70	(60 lbs.) \$14 00
Medium Red. This is our second grade, although it is called Fancy or Choice in some markets, and sold as the "Best" by most dealers.		3 25	(60 lbs.) 12 50
ALSIKE, or SWEDISH. Hardest of all Clovers. Adapted either for permanent pasture or hay crop. Yields heavily where ordinary Red Clover fails to give a full crop, either because of too dry or too wet soil. Sowing in mixture 1 quart of Alsike to 3 quarts of Medium Red Clover gives excellent results, both in the larger quantity and the improved quality of the hay and pasturage. This mixture also prevents winter-killing, which Red Clover is much subject to in this latitude.	50	3 25	(60 lbs.) 12 50
Alsike, or Swedish. Our second grade, usually sold as the "Best".		3 10	(60 lbs.) 12 00
ALFALFA, or LUCERNE. A perennial forage plant of strong growth; capable of withstanding prolonged drought by reason of the great depth to which the roots penetrate. When once a good stand is obtained it will give three or four cuttings each year for many successive years. It may be sown almost any time from April to September.	55	3 70	(60 lbs.) 14 00
Alfalfa, or Lucerne. Our second grade, sold as the "Best" in some markets.		3 10	(60 lbs.) 12 00
NOTE. —Alfalfa thrives best on sandy or light loam soil, but it will do well on heavy and clay soil if well under-drained and not sour. To correct any acidity give a good coat of powdered lime (see inside page of back cover), in fact, well-limed land is a necessity for successful Alfalfa crops. To get the surest and best results treat the seed of Alfalfa and all other legumes with nitrogen-gathering Bacteria. We recommend for this purpose			
Standard Inoculation. —By treating Alfalfa seed with this culture you are practically insured against failure, and the cost is less than any other insurance you ever had. Remember that inoculation not only makes sure the Alfalfa crop, but adds greatly to the fertility of the soil for future crops. 1-acre size, 50 cents, 5-acre size, \$2.50. In ordering Standard Inoculation be sure to name the crop. Free pamphlet on request. Think of it, only 50 cents an acre to insure a \$50 crop!			
MAMMOTH RED, or PEA VINE. It yields an enormous bulk of green provender. As the name indicates, it is of coarse growth, and not so valuable for pasture or hay as Medium Red Clover.	55	3 70	(60 lbs.) 14 00
Mammoth Red, or Pea Vine. Our second grade, commonly sold as the "Best."		3 25	(60 lbs.) 12 50
CRIMSON, or SCARLET. This variety has been called the "Great Nitrogen-gatherer," on account of the large amount of nitrogen that it gathers from the atmosphere and yields up to the soil when plowed under, increasing the fertility to a remarkable extent. It may be sown among corn at the time of last harrowing or after potatoes or grain when harvested. No cheaper and more effective method of manuring the soil can be adopted than by the use of Crimson Clover as a soiling crop.	30	1 90	(60 lbs.) 7 00
Crimson, or Scarlet. Our second grade, sold generally as the "Best".		1 75	(60 lbs.) 6 50

Prices of all varieties of Grass and Clover Seed vary with the market. Those given in the above lists are correct at the time of printing this catalogue, but are subject to change without notice.

SELECTED FARM SEEDS

Frequent renewal of seed is desirable with all farm crops. The first cost is greater, but the results amply repay the outlay. The varieties printed below in **heavy capitals** are the **Genuine Crown Field Seed**. Prices subject to market changes.

PEDIGREE SEED CORN. High-bred Seed Corn is just as much a farm requisite as high-bred animals. Pedigree Seed Corn may not look any better, but it produces better, and that is the sole and only test.

	Qt.	Pk.	Bus.		Qt.	Pk.	Bus.

SEED OATS. Grown in Minnesota. Thoroughly re-cleaned by special seed-recleaning machinery. Prices vary with the market.

JAPANESE BECKWHEAT. Best variety in cultivation. Large seed; strong-growing; heavy yield. Sow in June, three pecks to the acre. Qt. 10 cts., pk. 45 cts., bus. (48 lbs.) \$1.50.

MAMMOTH SUNFLOWER. Immense heads; large, striped seed. Plant in May, eight quarts to the acre. Qt. 15 cts., pk. 75 cts., bus. (25 lbs.) \$2.50.

KAFFIR CORN. Fine crop for ensilage or for forage, either green or cured. Sowing with cowpeas gives excellent results. Plant in May, eight quarts to the acre. Qt. 10 cts., pk. 40 cts., bus. (56 lbs.) \$1.25.

SOUTHERN COWPEAS. Many varieties. The most desirable are **New Era** and **Whippoorwill Cowpeas** and **Wilson Soy Beans**. Great nitrogen-gatherers and therefore splendid soiling crops. Rich forage crops, either green or cured. Plant after May 15, one and one-half bushels to the acre. Qt. 15 cts., pk. 75 cts., bus. (60 lbs.) \$2.25 to \$2.75.

CANADA FIELD PEAS. Make a crop rich in protein, either for ensilage or for forage, green or cured. Best results when sown in March or April, with oats, one bushel of peas with one and one-half bushels of oats to the acre. Qt. 15 cts., pk. 90 cts., bus. (60 lbs.) \$3.25.

SPRING VETCH. Valuable for summer forage. Usually sown with oats in March or April, one bushel of Vetch with one and one-half bushels of oats to the acre. Stock and prices uncertain.

HAIRY or WINTER VETCH. Sow in October, one-half bushel of Hairy Vetch with one bushel of rye, for the earliest spring pasture or forage. Also makes an excellent spring soiling crop. Stock and prices uncertain.

EARLY AMBER SUGAR-CANE. This makes a splendid crop for forage or ensilage; much relished by all stock. Sow in May, four to eight quarts to the acre. Qt. 15 cts., pk. 70 cts., bus. (50 lbs.) \$2.50.

DWARF ESSEX RAPE. Excellent forage crop for pigs, sheep and cattle; makes quick growth. Plant any time from April to September, four to eight quarts to the acre. Qt. 20 cts., pk. \$1.35, bus. (50 lbs.) \$5.

Early Bovee Potatoes

POTATOES

The importance of frequent renewal of seed for successful Potato-growing is so well understood by progressive farmers that they seldom plant their home seed, but renew it every season. For this climate Seed Potatoes should be grown in the far north and the **Genuine Genesee** stock is the highest type of this northern-grown seed.

For early planting in sandy and light loam soils there is no variety quite equal to the **Extra-Early Genesee**, a round, white Potato, with smooth skin and shallow eyes, cooking dry and mealy at the very beginning. It gives a big yield of best, marketable size, with few seconds. For heavier loam soil verging on to clay loam, we recommend the **Early Bovee** as the most satisfactory both as to quality and quantity of yield. For main-crop planting there are two varieties that take the lead—**St. Lawrence Prize** and **Pride of Vermont**. They are not so well known as some other varieties, but we are so sure of their great merit that satisfaction is guaranteed.

Price-List of All Varieties of Potatoes. Prices subject to market change

	Pk.	Bus.	Bbl. sack
EXTRA-EARLY GENESEE. Round to oblong; skin and flesh white; ripens uniformly...			
EARLY BOVEE. White flesh; skin slightly tinged and netted; fine quality; heavy yield...			
HOULTON ROSE. Best strain of Early Rose; yield and quality both superior.....			
STATE OF MAINE. Genuine Genesee stock, much superior to best standard stock.....			
ST. LAWRENCE PRIZE. For yield, quality and keeping it is unexcelled. Oblong, smooth.....			
PRIDE OF VERMONT. A vigorous Potato. Strong-growing; extra quality; long keeper.			
Early Ohio. An old favorite variety; very early; good quality and yield.....			
Irish Cobbler. A desirable early Potato; round with white skin and flesh.....			
Early Rose. The old standard variety. Good grade of seed but not equal to Houlton Rose.			
Beauty of Hebron, or New Queen. A well-known, medium-early variety.....			
Garfield. Has some local popularity, but not known generally.....			
State of Maine. Best standard stock, but unequal to the Genuine Genesee, noted above..			
Green Mountain. A Potato that is liked by many growers. Keeps well.....			
Carman No. 3. A round, white, late Potato of good quality, and yielding well.....			
Sir Walter Raleigh. A variety giving excellent results for late crop.....			

SPRAY MATERIAL AND SPRAYING

The orchardist and market-gardener of today have one common invocation—**Let Us Spray.** They must say it devoutly and do it with enthusiasm and devotion to insure success.

SUGGESTIONS

The question, when to spray and how to spray, is best answered by the bulletins issued by the various state experiment stations, and by the schedules sent out by all manufacturers of Sprayers and Spraying Materials. One or two elementary suggestions may, however, not be amiss:

Keep in mind that there are three distinct classes of insects or diseases to be fought:

- (1) Scale, the chief of which is San José Scale, produced by sucking insects.
- (2) Chewing insects, such as potato bugs, cabbage and tomato worms, codling-moth, etc.
- (3) Mildew, blight, rot, mold and other fungous diseases.

Having determined the disease, the remedies are: For No. 1, Lime-Sulphur solution, or oil solution like Scale Destroyer. For No. 2, Arsenate of Lead, Paris Green, Slug-Shot or Bug Death. For No. 3, Bordeaux in some form.

Sometimes two objects can be accomplished in one operation. For instance, the great remedy against scale, the lime-sulphur solution, is now known to act against fungous diseases also. Another very successful combination is the use of arsenate of lead and bordeaux in one solution. Both are based on a fifty-gallon solution, and after you have made your bordeaux solution according to formula, it is an easy matter to add the proper proportion of arsenate of lead and thus in one grand operation accomplish both objects, No. 2 and No. 3.

Lime-Sulphur Solution. A sure remedy for San José Scale and other diseases due to sucking insects and fungous growths. Usually sold in liquid form. But decidedly the most effective and easily handled form is the new **Niagara Sulphur Compound** as a powder. It has all the merits and none of the drawbacks of the common liquid Lime-Sulphur.

For Winter Spraying, Trees Dormant.—

Niagara Sulphur Compound. Dissolve one pound in five gallons of water. Lb. 25 cts., 5 lbs. 90 cts., 10 lbs. \$1.50.

Liquid Lime-Sulphur. Mix one gallon in nine gallons of water. Qt. 20c., gal. 50c., 5 gals. \$1.75.

For Summer Spraying, Trees in Foliage.—

Dissolve one pound of **Niagara Sulphur Compound** in 50 gallons of water, then add one pound of **Dry Arsenate of Lead.** Mix thoroughly.

Scale Destroyer. A soluble oil solution wonderfully effective against the San José scale and other diseases due to sucking insects. It has great spreading qualities and works into the crevices and cracks of the bark. Qt. can 35 cts., gal. can \$1, 5-gal. can \$3.75.

Slug-Shot. (Non-poisonous powder.) An insecticide that has been used for twenty-five years and still stands unrivaled for fighting cabbage and tomato worms, potato bugs and other destructive chewing insects. Much more favorable to plant-life than the poison insecticides. 1-lb. carton, with perforated top, 12 cts., 5 lb. package, 30 cts.

Bug Death. (Non-poisonous powder.) Highly recommended for use against potato bugs, tomato and cabbage worms and all other chewing insects. Lb. 15 cts., 3 lbs. 35 cts., 5 lbs. 50 cts., 12½ lbs. \$1.

Arsenate of Lead. (Poison.) The most effective insecticide. Adheres like paint to plants and leaves. Usually in paste form, but the Dry Arsenate is much more effective, and we strongly recommend its use.

Dry Arsenate. One to one and one-half lbs. in fifty gallons of water. Lb. 40 cts., 5 lbs. \$1.50.

Paste Arsenate. Two to three pounds in fifty gallons of water. Lb. 25c., 5 lbs. 90c.

Paris Green. (Poison.) Lb. 30 cts., 5 lbs. \$1.25.

Hellebore. (Poison.) To destroy rose bugs and other plant insect enemies. ¼ lb. 10 cts., ½ lb. 18 cts., lb. 30 cts.

Sulpho-Tobacco Soap. For spraying or sponging plants, shrubs, trees or vines. It acts quickly and effectively against aphid, red spider, plant lice and sucking insects. It will not injure the tenderest plant, but fertilizes and revives plant-life. Dissolve two ounces in one gallon of water. 3-oz. cake 10 cts., 8-oz. cake 20 cts.

STERLINGWORTH FISH OIL SOAP

This Soap has greater efficiency than the ordinary whale-oil soap, on account of the infusion into it of tobacco extract. It is a reliable and cheap remedy against scale, aphid,

plant-lice and other sucking insects. Lb. 15 cts., 5 lbs. 60 cts.

Sterlingworth Cutworm Killer. This is a coarse powder with an enticing odor, attracting the worms to it. It is non-poisonous and very effective. Do not use a poisonous Cutworm Killer. Lb. 25 cts., 5 lbs. \$1.

Nikoteen. A strong solution of nicotine, used in fumigating or spraying against the flea beetle, plant-lice, aphid and other like insects. Largely used in greenhouses and conservatories. One part of Nikoteen in five hundred parts of water. 1¼-oz. bottle 40 cts., half-lb. 90 cts., lb. \$1.50.

Aphid Punk. In sheets impregnated with nicotine and other chemicals. Used in fumigating; always effective, and convenient to use. Sheets 6 inches wide by about 36 inches long, 10 cts. each; box of 12 sheets 60 cts.

Tobacco Stems. For fumigating to destroy the aphid and other insects. Lb. 5 cts., 5-lb. pkg. 15 cts., 10 lbs. 25 cts., 25-lb. bag 50 cts., 100 lbs. \$1.50.

Quick Bordeaux. (Powder.) Dissolve one pound in five gallons of water. A remedy for potato rot, leaf blight, mildew and all fungous diseases. Lb. 15 cts., 2 lbs. 25 cts., 5 lbs. 45 cts., 10 lbs. 75 cts.

Pyrox. (Paste.) Death to worms and bugs as well as blight and other fungous diseases on fruit trees and all plants. Sticks like paint. It means a larger yield of fancy apples and fine potatoes. One pound in five to eight gallons of water. Lb. 25 cts., 5 lbs. \$1, 10 lbs. \$1.75, 25 lbs. \$4.

Bordo-Arsenate. (Paste.) Practically the same as the last named. Equally effective. Lb. 20 cts., 5 lbs. 85 cts.

Sulphate of Copper. For making bordeaux mixture and for spraying with arsenate of lead. Lb. 10 cts., 5 lbs. 45 cts.

Powdered Sulphur. For making lime-sulphur solution. Lb. 5 cts., 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2.25.

Kerosene Emulsion. For summer spraying against insect enemies. One gallon in twenty-five gallons of water. Qt. 25 cts., gal. 75 cts.

Conkey's Fly Knocker. Best friend of our fly-pestered animals. Qt. 35 cts., 2 qts. 60 cts., gal. \$1.

Weed Killer. For walks and pavements. One gallon in fifty gallons of water. Qt. 45c., gal. \$1, 5 gals. \$4.50.

ASK FOR SPECIAL PRICES ON LARGER QUANTITIES THAN QUOTED ABOVE

SPRAY MATERIAL AND SPRAYING, continued

TREE TANGLEFOOT

For protecting trees against caterpillars, canker worms, ants and all other climbing insects. A sticky substance applied directly to trees, and remains sticky three months in all kinds of weather. Needs no mixing. One pound makes 9 feet of band. Will not injure trees but gives full protection. 1-lb. can 30 cts., 3-lb. can 85 cts.

Tree Tanglefoot

THE AUTO-SPRAY COMPRESSED-AIR SPRAYER. For whitewashing buildings and fences; for spraying vines, bushes and fruit trees. Tank, pump and connections are made of brass; as this metal is not affected by the corrosive action of lime and other strong spraying solutions, the machine will last many years if given proper care. Continuous pumping unnecessary; a few strokes of the plunger will give sufficient air-pressure to throw a solid stream 20 feet high, and with the use of extension pipes, fruit trees can be covered with the spray. Each machine is equipped with shoulder-strap, hose, anti-choke nozzle, and two nozzle caps—spray and solid stream. Price, complete, \$7.25; brass extension pipes (2-ft. lengths) to fit hose, each 45 cts. If stop-cock is wanted in place of the anti-choke nozzle, deduct \$1.

ADMIRAL SPRAY PUMP. We consider this one of the best bucket Pumps on the market. It is made entirely of brass, with brass ball valves and brass valve seats. No leather or rubber valve washers to wear out. It is very easy to operate and very powerful, throwing a solid stream or spray 20 to 30 feet high. Can be used for whitewashing as well as spraying. Complete with spraying and whitewashing nozzles, \$3.75.

LIGHTNING SPRAYER. A popular little Sprayer that should be in the hands of every poultryman and farmer, as it can be put to so many uses. Made of heavy galvanized iron, 50 cts.; made of block tin, 35 cts.

LOWELL CONTINUOUS SPRAYER. An unique contrivance that must be seen and used to be appreciated. Will send mist-like spray straight ahead, up or down. Made of brass, \$1. Made of galvanized iron, 75 cts.

LOWELL POWDER BLOWER. Effective in applying insecticides in powder form. Satisfaction guaranteed by the manufacturer. Price, 60 cts.

DICKEY POWDER DUSTER. Desirable for applying finely powdered insecticides. Price, 30 cts.

THE CENTURY BARREL SPRAYER. The best all-round Barrel Sprayer on the market; very strong and durable, and with proper care will last for years. The pump is only 44 inches high, having the large air-chamber located principally within the barrel, leaving no projection to catch in the branches. The cylinder, being submerged in the liquid, is constantly primed. Equipped with a mechanical agitator and a double discharge "Y," so that two leads of hose may be used. Cylinder 2½ inches, stroke 4½ inches. All working parts are of brass and the plunger is provided with special packing. Fitted with 12½ feet of ½-inch hose and Demorel nozzle. Price, \$13. Extra lead of 12½ feet of hose with nozzle, \$3 additional.

THE CAPTAIN BARREL SPRAYER. This is a medium-priced outfit for the farmer, fruit-grower and gardener. No pains have been spared to make this the best Barrel Sprayer for the price. All working parts of brass. Equipped with efficient mechanical agitator and an adjustable clamp for attaching pump to barrel. Price, with 12 feet of ½-inch hose, couplings and Demorel nozzle, \$9.

NOTE.—We have not listed or described above any Power Sprayers, but the manufacturers of both the Century Pump and the Auto-Spray are also makers of Power Pumps and Sprayers of the highest type, and we can furnish any of their machines at factory prices, saving buyers the freight as well as the expense and uncertainty of dealing at long range.

Auto-Spray

Captain Barrel Sprayer

Century

SPRAY EARLY

Begin now to plan your spraying campaign for the coming season. Overhaul your Spray Pumps to see if they are in good working condition. If new parts are needed, consult with us now before the rush is on, and thus avoid delay and disappointment. We can supply you with new outfits, large or small, of the best manufacture, guaranteed to give the most satisfactory results. Look over our list of Spraying Materials (on page 21), and make up your order to submit to us for present or future delivery. You can thus be assured of having the proper materials when you need them.

FARM AND GARDEN TOOLS

Space will not permit our showing and describing all the "Planet Jr." tools, but we will send a fully illustrated catalogue, free for the asking, to anyone who desires it, and we can supply promptly anything ordered. "Planet Jr." goods are standard machines, the best on the market. In sending your orders to us, you can rely on getting bottom prices.

No. 25 Combined Single-Wheel Hill and Drill Seeder, and Double-Wheel Hoe, Cultivator and Plow

Price, \$13

No. 4 Combined Hill and Drill Seeder, Wheel Hoe, Cultivator and Plow

Price, complete, \$10.50; as a Seeder only, \$8.50

No. 31 Combined Drill Seeder, Wheel Hoe and Cultivator

Price, complete, \$6.50; as a Seeder only, \$4.50; as a Cultivator only, \$3

No. 25

Double-Wheel Cultivators

No. 11. 1 pair 6-inch hoes, 1 pair 4-inch hoes, 2 pairs cultivator teeth, 1 pair plows, 2 three-tooth rakes, 2 five-tooth rakes and 2 leaf-guards. Price, \$8.50.

No. 12. 1 pair 6-inch hoes, 2 pairs cultivator teeth, 1 pair plows and 2 leaf-guards. Price, \$6.50.

No. 13. 1 pair hoes only. Price, \$4.50.

Single-Wheel Cultivators

No. 16. 1 pair hoes, 3 cultivator teeth, 1 7-inch rake, 1 4-inch rake, 1 garden plow and 1 leaf-guard. Price, \$5.50.

No. 17. 1 pair hoes, 3 cultivator teeth and 1 garden plow. Price, \$4.50.

No. 17½. 1 pair hoes, 3 cultivator teeth and 1 leaf-guard. Price, \$4.

No. 18. 1 pair hoes only. Price, \$3.

International Pruning Knives

There are Pruning Knives of various types and prices, but none that equal the International Pruning Knives in general efficiency and ease of operation. They have many unique features that can be readily seen and appreciated on inspection, which we invite. Special circular sent on application. The following four types:

Orchard King.....	\$3 00
Kansas. Regular handle.....	3 00
Kansas. With extension handle.....	3 75
Happy Thought. 6-foot handle.....	1 50
Detroit. Easily operated and effective. With 6-foot handle.....	1 50
With 8-foot handle.....	25 cts. extra..
With 10-foot handle.....	50 cts. extra..

Detroit Hand Pruner. Made from high-grade tool steel, giving great strength without clumsiness. A serviceable and thoroughly dependable tool. Price, highly polished and with lock-nut \$1.50. Natural steel finish and no lock-nut \$1.

Norcross Cultivator-Hoes

Norcross Cultivator-Hoes

A combined hand hoe and cultivator that meets every requirement for the small home garden, and is equally useful to the large planter. Costs but little more than the common hoe—accomplishes much more and better work with less labor. It really cultivates the soil, not merely hoes it. By means of the Universal connection, the Norcross may be attached to the Planet Jr. or other wheel cultivators.

5-prong, 4-ft. handle.....	\$0 75

Kansas Pruning-Knife

The Mehler Handy Garden Tools

THE HANDY GARDENER. This is a hoe, rake, weeder and cultivator in one. It cultivates on three sides of the plant at one stroke—right up to the plant and over the root. The teeth will take hold, pulling out all large weeds, and the smaller weeds are cut out by the right-hand tooth, which is flattened out to a knife-blade. **Works with Ease—Saves the Knees.** Price, 75 cts.

The Mehler Edger

THE HANDY HOE. This is a very hard tool to describe because it has so many unique features and is really several tools in one. The word "Hoe" does not begin to describe it, as so many different kinds of work can be done with it. You had better see it. Price, \$1.

THE MEHLER EDGER. There are many tools called Edgers, but really there is only one **Edger**, the rest are all make-shifts. Do not take our word for it. Seeing is believing. Price, \$1.

SOCKET-PATTERN GARDEN TROWELS. You might think that a Trowel is a very unimportant tool; still it is very annoying to have your Trowel break just as you are doing some important work. You will say, "I will have to buy one of those English trowels that cost 40 or 50 cents." But why, when you can get this "Made-in-America" kind that will last most of your natural life, and cost only a trifle? Price, 5-inch size, blade all black, 10 cts.; 6-inch size, lower half of blade polished, upper half enameled paint. 18 cts.

The Handy Gardener

NOVELTY LAWN WEEDER. The blade, like a very narrow spade, can be driven into the soil alongside the weed; in case of a deep-rooted plant the root may be cut off well under the surface. Pressure on the lever then causes the toothed jaw to grasp the plant, and a slight pull will dislodge it without disturbing the surrounding sod. **A great back-saver.** Price, 75 cts.

The Lawn Roller

There is no tool more essential to the care of a nice lawn than a good Roller. It will prevent the grass drying out and assist in exterminating weeds, moles and other enemies. It adds to the efficiency of the lawn-mower to have the lawn level. The Lawn Roller is necessary on the tennis-court and on gravel walks.

Lawn Roller

In the winter, when the moisture-laden soil becomes frozen, it expands just as water does when it freezes. Thus the sod is raised up, and the thaw which follows the first warm days of spring allows the soil to settle back, but the grass roots, being much lighter, do not settle back with the same rapidity. This leaves the roots exposed to the air and the heat of the sun, with the result that the grass will die in places unless the lawn is thoroughly rolled during the spring months, to bring the roots in contact with the soil again.

DUNHAM ROLLER-BEARING LAWN ROLLERS are the result of years of experience in the manufacture of Lawn and Land Rollers. The Dunham is the only hand Roller made with roller-bearings, and will run 40 per cent easier than any other. The face of the roller is smooth and finished in aluminum; the outer edges are rounded to avoid cutting up the lawn. Last year the Dunham Company put on the market a new Roller which is so unique and desirable as to meet with instant and universal popular favor. It is the **Dunham Water-Ballast Lawn Roller.** This Roller is a water-tight drum which in a few minutes can be changed from a 125-lb. Roller to one of any weight up to about 600 lbs., simply by the addition of water, and reversing the process here

the light Roller again. By this means you buy only one Roller, but can do all kinds of rolling, light or heavy. We keep the most popular size in stock, and can procure any other size on short notice. Prices on application.

The Fountain Lawn Sprinkler

Made Entirely of Brass

A very popular Sprinkler. Makes a fine, mist-like spray and distributes the water evenly over the radius covered. It can be moved to any part of the lawn without turning off the water. Made entirely of brass, extremely simple in construction and very serviceable. Price, 75 cts.

NOTE: In addition to the Garden and Orchard Tools described on this and the preceding page, which we carry in stock, we have arranged with leading makers to supply, at short notice, other necessary tools and implements, so that we may be able to furnish **EVERYTHING FOR THE GARDEN AND ORCHARD.** Write us for any information you may wish about these supplies.

of increasing the fertility of the soil by growing leguminous crops. Legumes enrich and renovate the soil and are rich in food-value for man and beast. Stimulate their growth and increase their yield by using **Nitrogen-gathering Bacteria** on your next planting of alfalfa, clovers, soy beans, vetch, peas and all other legumes. It will not only greatly increase their yield, but will add to the fertility of the soil, so that succeeding crops will be larger and better.

Important.—Always state the crop when ordering either of the following cultures:

Mulford Cultures

FOR LEGUMES

The name of H. K. Mulford Co. stands for knowledge, reliability and good service, so that you may depend without question on the purity and efficiency of the **Mulford Cultures**.

1/4-acre size.....	\$0 50
One-acre size.....	1 50
Five-acre size.....	5 00

Just think of it—this dependable bacteria culture costs, in quantity, only a **dollar per acre!**

The pure culture made by this process has exceptional vitality, and is guaranteed to produce superior results. The question of price is of small importance if your legume crop and the after fertility of the soil are insured by the use of this wonderful culture.

Garden size.....	\$1 00
One-acre size.....	2 00
Five-acre size.....	9 00

FERTILIZERS

To return to the soil what the crops take from it is self-evident wisdom. Not to stimulate production, but to repair waste, is the true theory of all permanent fertilization, and any fertilizer to be really valuable must return to the soil these used-up elements.

Bowker's Plant-Food. For potted plants. Concentrated, odorless. Small pkg. 15 cts., large pkg. 25 cts.

Oyama Plant-Food. Will give potted plants a vigorous and healthy growth. Small pkg. 10 cts., large pkg. 25 cts.

Ideal Lawn Dressing. The most effective lawn fertilizer ever prepared; very quick-acting as well as lasting. Apply 5 to 10 lbs. to 400 sq. ft. 5 lbs. 25 cts., 25 lbs. \$1, 50 lbs. \$1.75, 100 lbs. \$3, 200 lbs. \$5.

Pure Raw Bone Meal. 5 lbs. 25 cts., 25 lbs. \$1, 50 lbs. \$1.50, 100 lbs. \$2.50, 200 lbs. \$4.50.

Fine Ground Bone. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2.25, 200 lbs. \$4.

High-Grade Guano. The best all-round fertilizer on the market for truck and other crops needing rapid growth and early maturity. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2, 200 lbs. \$3.50.

Special Potato Manure. 5 lbs. 20 cts., 25 lbs. 75 cts., 50 lbs. \$1.25, 100 lbs. \$2, 200 lbs. \$3.50.

Excelsior Guano. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 90 cts., 100 lbs. \$1.50, 200 lbs. \$2.75.

Nitrate of Soda. The best source of commercial nitrogen. Care must be taken in using it alone. 5 lbs. 30 cts., 25 lbs. \$1.25, 50 lbs. \$2.25, 100 lbs. \$4, 200 lbs. \$7. Subject to change.

Muriate of Potash and Kainit. Source of supply cut off by European War.

Nova Scotia Land Plaster. The best grade. Cheaper grades are dear at any price. 5 lbs. 10 cts., 25 lbs. 30 cts., 50 lbs. 45 cts., 100 lbs. 75 cts., 200 lbs. \$1.10. By measure, qt. 5 cts., pk. 25 cts., bus. 75 cts.

Asparagus Salt. A special salt for use on asparagus beds; dry and very strong. 5 lbs. 10 cts., 25 lbs. 25 cts., 50 lbs. 40 cts., 100 lbs. 60 cts., 200 lbs. 90 cts. By measure, qt. 5 cts., pk. 20 cts., bus. 60 cts.

Pulverized Sheep Manure. This is a pure natural fertilizer, and is unsurpassed for any purpose where quick and lasting results are wanted. It is an ideal lawn fertilizer, excellent for mixing with potting soil for greenhouse work and hotbeds and unequalled for general use in the flower- and vegetable-garden. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 90 cts., 100 lbs. \$1.60, 500 lbs. \$7.50, ton \$28.

Pulverized Cow Manure. Prepared in the same manner as the last-named and sold at the same prices. Used with Bone Meal, Pulverized Cow Manure makes the ideal fertilizer for roses, two parts of Cow Manure to one of bone.

Pulverized Animal Manure. Prepared from the indiscriminate droppings of all animals, and as the supply is so much larger, the price is correspondingly lower than the two just described. For general purposes, there is no fertilizer equal to it in value for the price. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 85 cts., 100 lbs. \$1.50, 500 lbs. \$6.50, ton \$24.

Canada Hardwood Ashes. Are rich in potash and lime, hence greatly added value at the present time. Indispensable as a lawn dressing, giving to the grass that deep, rich green color which is so much admired. They should be applied late in the fall or early spring, so that they will reach down to the roots of the grass. Also excellent for application to orchards. 5 lbs. 15 cts., 25 lbs. 50 cts., 50 lbs. 90 cts., 100 lbs. \$1.50, 500 lbs. \$7, ton \$25.

Powdered Lime. Nearly all soils need lime—to some it is the one thing necessary to make them productive. Lime corrects the acidity of the soil and makes it sweet and life-giving. Our Powdered Lime is most convenient to apply, and is more active and readily assimilated than ordinary lime. 50-lb. bag 35 cts., 3 bags for \$1.

Prices on all Fertilizers by the ton or carload quoted on application

We are agents for **Baugh's High-Grade Fertilizers**, the brand of quality.

How to Make a Lawn

If the ground intended for the lawn is wet and sour, it should first be thoroughly under-drained. In the autumn, dig or plow the ground to a depth of 6 to 12 inches, according to the nature of the soil. It should then be raked and leveled, to remove stones and get the soil in good tilth, after which make firm with a heavy iron roller. Where the natural soil is too stony or gravelly, a supply of good mold should be spread over it to a depth of 2 to 3 inches, taking care to select earth as free as possible from weed seed. In March or April, before sowing the seed, the ground should be well cultivated, thoroughly cleaned, and made perfectly level with the iron roller, and as the subsequent appearance of the lawn depends in a great measure on this part of the preparation, it is of the utmost importance that it be well done. During this stage of the work, apply our **Ideal Lawn Dressing** at the rate of 10 pounds to a plot 20x20 feet. The seed may then be sown, using our **Brandywine Park Lawn Grass Seed** at the rate of one quart to a plot 25x25 feet, or two bushels to the acre. The best time to sow the seed is in March or April, although good results are also obtained by sowing in September or October. Select a calm day, so that the seed may be distributed evenly over the ground. Finally pass over it a light roller, to compact the soil about the seed and give it a better chance to germinate.

Use Brandywine Park Lawn Grass Seed Use Ideal Lawn Dressing

For full information about grass seed and grass-seed mixtures for general and special purposes, refer to pages 17, 18 and 19 of this catalogue.

Let us know what you want to accomplish. An ordinary lawn? A golf-course? A tennis-court? A pasture? We are at your service and can help you to a right decision.

We do not purchase our grass seed from any large dealer in New York or Philadelphia, but get our supplies direct from the grower, whether he be in Kentucky or Holland.
